NZ FARMERS LIVESTOCK

Working with Farmers for Farmers

Proudly working with Ipurua South Devon

At NZ Farmers Livestock, our clients benefit from our history and experience in the market. We bring extensive experience and knowledge gained through trusted and long-established relationships within the rural community. We add value for you, by supporting you, to market.

And, we understand **Finance**, and how important flexibility and speed of delivery is a necessity when it comes to farming. NZ Farmers Livestock Finance has a facility available for all your finance needs. We pride ourselves on our **fast acceptance and personal support. Our dedicated agents are committed to supporting you.**

For more information, please contact Brent Bougen 027 210 4698, Alan Hiscox 027 442 8434 or Brett Wallbank 027 488 1299.

Conditions of Sale

1. The auction will be conducted under the Conditions of Sale laid down by the Stock and Station Agents Association.

2. Each Lot will be at the risk of the Vendor until the fall of the hammer. Purchasers are strongly advised to insure cattle prior to transit.

3. Finance terms are strictly cash prior to delivery unless credit arrangements have been made with the Auctioneer prior to sale.

4. The entry of Bulls in this catalogue constitutes a guarantee of fertility. A Veterinary Surgeon's Certificate shall be produced by the Purchaser. Any dispute shall be settled by an Arbitrator appointed by the Auctioneer.

5. Although all care has been taken to ensure accuracy of the information contained in this catalogue, no responsibility is accepted for any error or omission that might be contained herein.

6. All Bulls are TB Accredited.

7. The sale will be conducted exclusive of GST.

Fertility

The entry of a bull into this sale constitutes a guarantee by the vendor that the purchase price without interest, expenses, costs or damages shall be refunded in full if a bull proves totally infertile or incapable of service. If any bull entered does not possess a reasonable fertility although not totally infertile, any dispute shall be settled by an arbitrator appointed by the auctioneer and the vendor and a veterinary surgeons certificate will be requested.
Any complaint must be lodged with the auctioneers within 9 months of date of sale.

Structural soundness

Bulls are guaranteed to remain structurally sound ie Fit for mating for a minimum of **three seasons**. (This guarantee does not extend to include injury, disease or environmentally caused unsoundness.) Should a bull not meet this guarantee, the purchaser will be refunded a proportion of the purchase price depending on the number of seasons use obtained, and less the meat value at the time of purchase. The remaining value to be equally divided between the three years. As above refund will exclude interest expense and cost of damages.
Under no circumstances will the vendor enter any negotiations if they have not been given the opportunity to view the animal in question.
Any disputes shall be settled by an arbitrator appointed by the auctioneers and the vendor and a veterinary surgeons certificate will be requested.

Estimated Breeding Value (EBV) Explanation

BWT: Birth weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200: 200-Day Growth EBV (kg) is calculated from the weight of the animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calcuated from the weight of the progeny taken between 301 and 500 days of age, adjusted to 400 days and for dams age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of the progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 day weight of the daughters' calves.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight and is adjusted to 650 days of age. This is estimated from actual abattoir data where available, otherwise from correlation's to the growth traits.

EMA: Eye Muscle Area EBV (cm2) estimates differences in eye muscle area at the 12th/13th rib site of a dressed weight carcase. More positive EBVs indicate better muscling on animals.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12th/13th rib in a 300kg dressed weight carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed weight carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity. Two fat EBVs are listed as there is variation between animals regarding fat depth at two sites.

EBV Accuracy

The higher the accuracy % the lower the probable variation in performance from the stated figures.

Disclaimer

The South Devon GROUP BREEDPLAN Estimated Breeding Values contained in this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the South Devon Society of New Zealand Inc, nor the ABRI oversee this data. Neither ABRI, NZ South Devon Society or the vendor accept any responsibility for the use or interpretation of information on the animals included in this catalogue.

Foreword

The Ipurua South Devon Stud was established in the late 70's with the purchase of a number of grade cows. It was developed into a predominantly English purebred herd through the addition of 12 cows in 1983 and 10 in 1994 from Woodah (J Holt) Blenheim. The original commercial component of the herd comprised of cows involved in an ongoing grade up programme originating from an Angus base in the late 70's.

Our commerical herd was inspected in 2012 with the greater majority being accepted to the South Devon Register. Performance data is now being added for the previously unregistered animals. This includes both weights for growth rate analysis and scan data for carcass trait analysis. This carcass data is crucial if we wish to balance the growth rate EBVs and produce a carcass that is worth hanging on the hooks and females that are winter friendly.

The 200 cow herd continues to be developed on our hill country property under strictly commerical conditions. The heifer component of the herd are calved as 2yr olds to South Devon sires. The herd calves October / early November to fit in with the overall commercial management of our operation. Whilst this decision to calve late obviously impacts on the animals age and hence size, it has absolutely no bearing on the individuals genetic make up.

Stong selection emphasis has been given to soundness, longevity, quality fleshing and temperament. Polling is also playing an increasingly significant role in our breeding programme. Whilst still considered a bonus and not something to sacrifice the above aims for, just over 60% of the 2020 calves were polled.

We welcome on farm inspection of all stock.

Thank you for your participation.

Peter & Caroline Foss

The following table shows the Average EBVs for the 2020 born animals included in this Group Run.

GL	BW	200	400	600	MILK	SS	CWT	EMA	RIB	RUMP	IMF	RBY
-0.6	+0.9	+13	+24	+31	+2	+0.8	+21	+0.9	-0.1	-0.2	+0.1	+0.3

As stated in the ABRI notes on EBVs, accuracies below 75% should be considered low.

All cattle are T.B. Accredited (C10)

Sale bulls are tested BVD antigen negative and vaccinated.

Handling your new bull

The transition from one farm to another can be a stressful time for your bull, leaving the security of a familiar mob and arriving at new yards which are completely unknown to them.

To minimize the stress and help your bull to settle at your farm we suggest you:

- Put him with a small group of quiet cows or steers in a good paddock.

- Allow ample time when shifting and handling.

- Check your bull regularly at mating time as occasionally accidents do happen. When finished put him back in a good paddock as ample feed reduces the problem of fighting.

- Don’t hesitate to contact us if you have any concerns.

Ipurua WILTSHIRES

BREEDING HILL COUNTRY SHEEP

- **No shearing**
- **No dagging**
- **No dipping**
- **Less drenching**

Continuing incompetence across the marketing sector of the crossbred wool industry has forced frustration levels to an unacceptable high, something had to change. On the back of seemingly unbelievable claims, we ventured into the Wiltshire sheep breed. In April 2017 we purchased 100 purebred ewes, adding a further 150 in December 2017. Feb 2019 saw us miss out on 130 5/6 yr ewes. There are never many prizes for 2nd place but as under bidder at $460 you would have to wonder. Feb 2020 we returned to the same annual sale and bought 180 ewes @ $155.

April 2022 we put just over 400 Wiltshire ewes to the ram, all of which are in the SIL system. This Spring we FE dosed 25 2T rams at 0.27, with only 3 rams testing moderate or severe. This along with Autumn GGT level tests is producing very good gains in our flocks FE status.

2T Ram on farm auction - Thursday 24th November
