# FOREWORD

Rob & Nikki welcome you to the 77th Annual Sale of Rising 2 year old Angus Bulls from Tarangower.

The Tarangower Angus Stud was founded in 1926 by Les Purdie, Rob's Grandfather. Initially bulls were sold privately from the farm and then until around 1940 they were walked to Te Kuiti to be sold – some 66 km's away. From 1940 until 1946 the bulls were trucked to the Te Kuiti saleyards where they were sold at the Combined Te Kuiti Sale, but in 1947 the sale returned to the Tarangower property where it has continued to be held annually.

Tarangower runs 180 stud cows, and 1200 Perendale Breeding ewes under commercial conditions. Bounded by the Mokau River we farm 1150 acres effective and winter approx 9 su per hectare. All stock are fattened at Tarangower, and each year we carefully select & retain approx 45 heifers to include in our herd. Our winters can be very wet and long with average rainfall 70-80 inches per year.

From 3yr old on cows are expected to raise a calf annually and any dry cows are culled. Tarangower implements a rigorous culling procedure, poor performing cows and any with bad temperaments or conformation problems are also culled.

The bulls are run in one mob from weaning until mid June then they are split into groups of 20-25 and carefully selected till what you see at Auction 12 months later.

Our aim is to breed sound cattle of good temperament, structure, muscling with good fertility and each year we look to source 1 or 2 quality Stud Bulls that will compliment and enhance our cow herd.

No supplements are fed – grass and hay only.

INSPECTION AND ENQUIRIES WELCOME

# CONDITIONS OF SALE

1. All lots sold EXCLUSIVE OF GST
2. Each lot becomes the property of the purchaser at the fall of the hammer.
3. Delivery – is free of charge to North Island locations. Bulls will be delivered as soon as transport can be arranged.
4. Although all care has been taken to ensure accuracy of the information contained in this catalogue, no responsibility is accepted for an error or omission that might be contained herein.
5. We reserve the right to change the catalogue order at any time.
6. Purchasing Rebate – all intending purchasers MUST register at the sales office prior to the sale. A purchasing rebate of 5% will be paid to the non-participating livestock companies and recognized independent livestock agents with approved credit facilities introducing and/or accompanying new buyers to the sale. Arrangements must be made with the Auctioneer prior to the sale and settlement made on the buyers behalf within 14 days of sale.
7. OSH – Tarangower Angus, their staff and the Auctioneers on the day of the sale will take every effort to ensure the safety of buyers and visitors. However this is a farm run under normal management conditions and certain dangers exist in relation to the livestock and environment. All visitors should take all care to ensure their personal safety.
8. This sale will be hosted by BIDR & MyLivestock as a HYBRID auction with online bidding and live-stream available on sale day as well as the normal on-farm format. We recommend all on-line purchasers register in advance of our sale date

## DISCLAIMER:

The TransTasman Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither the AngusNZ nor ABRI oversee or audit the collection of this data.

## TARANGOWER ANGUS GUARANTEE

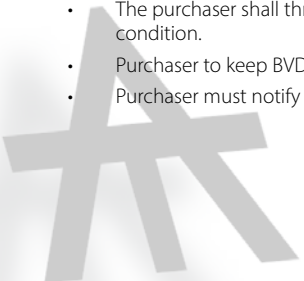

- C10TB status – Herd tested August 2021
- All bulls BVD tested. Bulls have been vaccinated twice for BVD, 10n1 and Lepto. (August 2021).
- All bulls are free from the 4 genetic defects AMFU, NHFU, CAFU and DD by virtue of their pedigree or have been tested. We have been thorough in going through our herd and are happy that none of our cattle carry any of these genetic conditions.
- All calves are weighed at birth and all bulls sold at sale data performance recorded and carcass scanned.
- Bulls are farmed under strict commercial conditions and are not over fed nor fed anything other than grass and/or hay/silage during their first winter and for a few weeks leading up to sale day.
- Tarangower is a family owned and run business and have been selling quality bulls for 97 years.

## FERTILITY AND STRUCTURAL GUARANTEE

- All bulls in this catalogue are guaranteed fertile and structurally sound for breeding purposes for 3 years and have been fertility tested by Viabull Ltd. (please see report in this catalogue.)

### **Conditions of Guarantee:**

- Notice of infertility or unsoundness in any such case must be advised to the vendor as soon as possible. We will refund the purchase price of the bull, value decreasing by 1/3rd each year. This been without interest, expenses, costs or damages, and also taking into account salvage/killing income.
- A Veterinary Certificate will be required.
- Any dispute shall be settled by an arbitrator appointed by the Auctioneers .
- The purchaser shall throughout the guarantee period provide the bull has proper care and attention and make sure he is maintained in good health and condition.
- Purchaser to keep BVD vaccinations up to date – yearly.
- Purchaser must notify vendor prior to disposal of bull unless for humane reasons.

## Fertility Testing Report

0272880980

All sale bulls tested at Tarangower Angus on 16/03/2023 have passed a fertility test and have Viabull semen satisfactory for breeding potential.

They have passed the following:

1. Palpation and examination of testicles
2. The penis and sheath have been examined for any apparent abnormality e.g. sores, lacerations, abscesses, hair rings, warts, corkscrew, scar tissue and signs of damage
3. Microscopic evaluation of the semen sample has been tested for motility % of live sperm morphology % of normal vs abnormal within the sperm

All bulls have been presented to me in very great condition and in a healthy state. I wish the team at Tarangower Angus all the best.

Darren Williams  
Manager

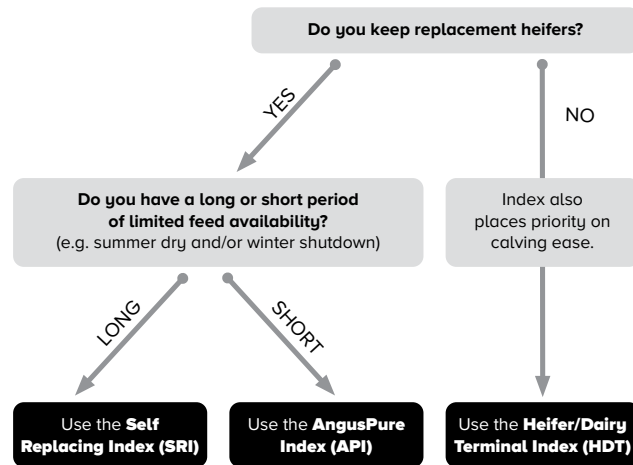

## ANGUS NZ EBV's Explained

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

### A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND ANGUS SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

#### Which New Zealand Angus Selection Index should you use?

1. Identify the **Angus New Zealand selection** index of most relevance to you.
2. **Rank animals** using the chosen selection index.
3. Consider the individual EBVs of importance.
4. Consider other traits of importance (e.g. visual assessment).

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here [www.angusnz.com](http://www.angusnz.com).

## TRANSTASMAN ANGUS CATTLE EVALUATION

A TACE Guide to Interpreting EBVs outlines how to assess and compare the genetic merit of animals. Please note that only EBVs from the same TACE analysis can be directly compared. The New Zealand Angus Association publishes the following TACE EBVs:

**Calving Ease Direct (%):** Higher (or more positive) CEDir EBVs indicate that two year old heifers will have less difficulty when calving this sire's progeny.

**Calving Ease Daughters (%):** Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at two years of age.

**Gestation Length (days):** Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

**Birth Weight (kg):** Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

**200, 400 & 600 Day Weight EBVs (kg):** Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

**Mature Cow Weight (kg):** Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

**Milk (kg):** Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

**Scrotal Size (cm):** Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

**Days to Calving (days):** Bulls with lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval from bull-in date to calving.

**Carcase Weight (kg):** Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

**Eye Muscle Area (sq. cm):** Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

**Rib and Rump Fat EBVs (mm):** Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter

progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

**Retail Beef Yield (%):** Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat (%):** Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

**Docility (%):** Bulls with higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

For more information on **using and understanding TACE EBVs & information**, including the BREEDPLAN Guides, scan the QR code.

<https://breedplan.une.edu.au/media/dtqpdm34/using-and-understanding-breedplan-ebvs.pdf>

## SELECTION INDEXES

The New Zealand Angus Association currently reports three different selection indexes. These are the:

- Self Replacing Index
- AngusPure Index
- Heifer/Dairy Terminal Index

Each selection index is reported in units of net profitability per cow mated (\$), and relates to a commercial herd using Angus bulls. Each selection index is focused on efficient beef production, including maternal traits where appropriate. Scan the QR Code for more detail.

<https://breedplan.une.edu.au/media/bqjbnnbh/using-new-zealand-angus-selection-indexes.pdf>

## MANAGING BVD IN YOUR HERD

BVD is a Pestivirus that infects cattle, usually between the ages of 6 months and 2 years.

The main impact of BVD is on breeding animals.

### How do cattle contract the virus?

- The virus is spread by direct contact with an infected animal.
- A Persistently Infected Carrier (PI) animal is born after their mother is infected for the first time with the BVD virus, between 1 & 4 months of pregnancy.
- All calves born to PI animals will be PI's themselves.

### Is BVD treatable?

The disease is not directly treatable. In normal healthy animals, BVD is usually a short lived disease, which the animal recovers from by itself.

- Normal healthy animals may scour for a few days and experience a check in growth rate.
- Bulls may be temporarily infertile.
- Pregnant cows or heifers, depending on the stage of pregnancy may show empty, abort the foetus, give birth to weak, sickly or deformed calves, give birth to PI carrier animals or give birth to a normal antibody positive calf.
- PI carrier animals often appear normal until they develop 'mucosal disease' (fever, ulceration of gums, oesophagus and entire digestive tract). Mucosal disease in PI animals is always fatal and all PI animals should be culled as soon as they are identified.

The only way to determine the BVD status of your herd is by blood testing. Discuss options with your vet.

To protect your herd against BVD it is advised to bring in no outside animal unless it has been tested clear of the BVD virus. This is particularly true of breeding bulls. Most stud breeders have BVD programmes in place and do pre-sale BVD/EBL testing. Always check before you purchase a bull. To avoid temporary infertility in your sires if exposed to BVD while out with the cow, always give them a booster vaccine prior to mating.

## GENETIC DEFECTS IN ANGUS

Arthrogryposis Multiplex (AM) and Neuropathic Hydrocephalus (NH)  
Contractural Arachnodactyly (CA)

AM, NH and CA are simple recessive gene defects, caused by the presence of a single pair of inherited genes. The red gene in Angus cattle is a common example of recessive inheritance-the gene must be present on both sides of the pedigree for full expression.

If a carrier sire and a carrier dam are mated, 25% of the progeny will be clear of the defect, 50% will be carriers, and 25% will be affected.

A DNA test has been developed to identify earlier animals so these defects can be eliminated from the breed.

After such DNA testing, you will be given one of two results;

AMF, NHF or CAF = tested free of the gene

AMC, NHC or CAC = tested carriers of the defect.

But, to assist with the identification of carrier animals (prior to DNA testing) a 'probability test' has been developed -using updated test results and animals' pedigrees, known as Geneprob. Geneprob will identify 'at risk' animals in the breed database and assign them a status for AMS or NHS as follows;

AMFU, NHFU and/or CAFU = free by pedigree inference, untested  
AMS %, NHS% and/or CAS% = a suspected carrier( % = level of suspicion) but un-tested. Requires testing to validate true status.  
AMF ,NHF and/or CAF =tested free of the defect  
AMC, NHC and/or CAC = tested carrier of the defect.

These GeneProb analysis tests are performed every seven days. Genotyping for these mutations should, with 100% accuracy, expedite elimination of these genes from the Angus population. If you are unsure of any aspect of these genetic defects please enquire of your bull supplier or ring the NZ Angus Association on 06 3234484.

Dam's Performance: 13/13

Purchaser: \_\_\_\_\_ Price: \_\_\_\_\_

# **Caring For Your New Bull**

At Tarangower the bull you select has been running with other young bulls. When he arrives at your home, make sure you have cows or steers at the yard to put him with as this will help settle him – remember the last few days have probably been a very scary time.

He will be used to good quality hay. Caring for your bull, especially the first twelve months, will ensure that he will mature into a good strong sire.

---

## **NOTES**

# HERITABILITIES ESTIMATES IN ANGUS

 The amount of genetic influence in a trait.

 The amount of environmental (non-genetic) influence in a trait.

## VISUAL APPRAISAL IS STILL VERY IMPORTANT FOR SELECTING BULLS

- **MASCULINE TRAITS** -A strong head, jaw and thick neck indicate high levels of libido, testosterone and reproductive efficiency.
- **NECK LENGTH** -A thick necked animal matures and reaches puberty earlier and has more libido. A longer neck indicates a higher maintenance animal that is slower to reach puberty and rebreed.
- **HEART GIRTH** - larger heart girth is an indicator of vigor and easy keeping ability. Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well.
- **STRUCTURAL SOUNDNESS** - Feet and bone- Hill country cattle cover large distances over rugged terrain so a strong skeleton is essential.
- **REPRODUCTIVE** - A tight sheath, good sized and shaped testicles are essential.
- **FLANK** - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency. Higher flanked animals tend to be higher maintenance and take longer to finish on grass.

# April 2023 TransTasman Angus Cattle Evaluation - Percentile Bands for all 2021 born animals

Use this table as a guide to compare individual animals with the current genetic level of the breed
