# FOREWORD

*We would like to welcome everyone to the annual Shian Bull Sale. The property of 757 hectares is located 11 kilometres southeast of Taumarunui in the King Country.*

*Shian Angus was established in 1972 by Brian and Sharon with the purchase of two stud heifers from the Lairdvale Stud.*

*In 2014 son Rob and his wife Tracy came into partnership with Brian and Sharon and the operation is now farmed under the name Shian Farms. At present we run*

*approximately 250 stud cows. All females going into the herd are calved as two year olds.*

*The cattle we aim to breed are well framed, fertile, quiet cattle with structural soundness and a good balance of EBV's.*

*This year marks a significant milestone with Shian Angus bringing up 50 years of breeding. A lot of things have changed in 50 years, from the shape & size of cattle that were in demand to the use now days of EBV's. But Shian has always moved with the times & like a good whiskey got better with age. Brian & Sharon have always had a big family focus when it comes to the farm & stud with Dean the oldest son working full time at a younger age. Daughters Jane & Tracy helping out where they can and still do, and now being in partnership with son Rob & his wife Tracy.*

*Also this year Shian will be donating lot 14 to Starship Childrens Hospital. Brian came up with the idea after the team at Starship cared for Grandson Nic so well during his battle with leukaemia. It's the least we could do to help out other kiwi families in need.*

*This season has been less than ideal to say the least. But the bulls have powered on through none the less and we are really happy with the line up we are putting forward to you this year. Deep, meaty structurally sound cattle with plenty of bone, with EBV's to match. Once again Mako & Ranger have left a line of stylish well finished cattle. We also introduce some new sires, with Merchiston Powerhouse, Matauri TaraTara & two Waiterenui bulls, Klooney & Cap who went over yearling heifers. All of these bulls have left their mark on their sons.*

*We look forward to seeing you on sale day and invite you to join us for a BBQ and refreshments after the sale.*

## FERTILITY GUARANTEE

The entry of a bull in the catalogue *ipso facto* carries with it an undertaking by the vendor that the purchase price (without interest, expense costs or damages) will be refunded should the bull prove totally infertile or incapable of service. If a bull so entered should not possess a reasonable fertility, although not totally infertile, any dispute shall be settled by an arbitrator appointed by the auctioneers and the award of such arbitrator shall be accepted as final and binding by the parties to the dispute. Any complaint must be lodged with the Vendor in writing within six (6) calendar months of the date of the sale. The cost of taking delivery of and returning a bull to the Vendor shall be borne by the purchaser. A veterinary surgeon's certificate shall be produced by the purchaser when required. The undertaking is limited to the individual value of a bull as a breeder and does not exceed to the loss of profits or otherwise sustained in the event of infertility or non-capacity being proved. The undertaking shall bind the executors or administrators of a vendor.

TRIAL PERIOD: In every case a trial period of twelve calendar months from the date of sale must be allowed to test the fertility of the bull.

The incapacity due to injury from whatsoever cause or to illness or disease suffered or contracted after the date of sale is not covered by the guarantee.

That the purchaser shall throughout the guarantee period give the bull full and sufficient opportunity to prove that he is a good server and stockgetter or to demonstrate his ability to get stock whichever the case may be.

The purchaser shall throughout the trial period assure that the bull has proper care and attention and is maintained in good condition and health.

Failure on the part of the purchaser to observe or perform the foregoing conditions or any of them shall render the undertaking void.

Shian Angus: HB number: 16461

0272880980 25/3/22

## Fertility Testing Report

All Bulls at Shian Stud

Has passed a fertility test and have Viabull semen satisfactory for breeding potential. The bulls have passed the following:

1. Palpation and examination of testicles.
2. The penis and sheath have been examined for any apparent abnormality e.g. sores, lacerations, abscesses, hair rings, warts, corkscrew, scar tissue and signs of damage.
3. Microscopic evaluation of the semen sample has been tested for motility % of live sperm morphology % of normal vs abnormal within the sperm.

All bulls have been presented to me in good condition and in a healthy state.

Darren Williams  
Manager

## **DELIVERY**

Delivery of bulls will be free within the North Island at the Vendor's convenience.

## **INSURANCE**

We recommend purchasers to insure their bulls on the day of sale.

## **COMMISSION**

All intending purchasers are required to register at the sales office prior to the sale. A purchasing rebate of 6% will then be paid to non-participating livestock companies and recognised independent livestock agents with approved credit facilities introducing new and/or accompanying buyers to the sale. Arrangements must be made prior to the sale and settlement made on the purchasers behalf within 14 days.

## **G.S.T**

All Lots plus G.S.T

## **CONDITIONS OF SALE**

1. The Sale will be conducted under the Rules and Regulations of the N.Z. Stock and Station Agents' Association as posted on to rostrum.
2. Transfer fees are payable by the purchasers except in the case of cattle sold for export, when the transfer fee is payable by the Vendor.
3. Purchaser of Cattle for export to contact Vendor prior to sale to confirm health tests required.
4. All transfers must be signed on the day of sale.
5. All cattle become the purchaser's responsibility from the fall of the hammer.
6. All cattle have passed the Tuberculosis tests and are accredited clear of Brucellosis.
7. **Genetic Defects -**
  - AM (Arthrogryposis Multiplex)
  - NH (Neuropathy Hydrocephalus)
  - CA (Contractural Arachnodactyly)
  - DD (Developmental Duplication)
  - FU (Free Untested)All bulls are AMFU, NHFU, CAFU and DDFU

## **TRANSFERABLE BULLS**

Bulls for transfer are noted, any queries on non stated transferable bulls talk to vendor.

# bidr<sup>®</sup> is here.

**At NZ Farmers Livestock, our clients benefit from our history and experience in the market.** We bring extensive experience and knowledge gained through trusted and long-established relationships within the rural community. We add value for you, by supporting you, to market.

And, we understand **Finance**, and how important flexibility and speed of delivery is a necessity when it comes to farming. NZ Farmers Livestock Finance has a facility available for all your finance needs. We pride ourselves on our **fast acceptance and personal support**.

**Our dedicated agents are committed to supporting you. For more information, please contact Brent Bougen 027 210 4698, Alan Hiscox 027 442 8434 or Vaughan Rogers 027 452 1568.**

## CARING FOR YOUR BULL

When your bull arrives home it is a good idea to have company for him, preferably a steer or cow as he is used to being run in a mob. Shian bulls are not used to horses but are used to being worked with motor bikes and dogs, they also respect electric fences.

## HAZARDS

Under Health and Safety Regulations please make yourself aware of the following hazards

1. Cattle Movements
2. Work Vehicles
3. Cattle Yards, Slippery Surface
4. Grandstand Steps
5. Woolshed Steps
6. Bull Sale Area
7. No Children in pens with bulls

# YOU CAN RELY ON FMG TO STAND BY YOU. LITERALLY.

A bull is a big investment. Which is why FMG is right there with you to ensure you get the very best cover on sale day, and the best service every day after that. That's because we understand livestock insurance as much as we understand the importance of personal service. So talk to your FMG Rural Manager about FMG Premier Bull Sales cover. All bulls sold at auction up to \$50,000 can be covered for 6.5% of the purchase price and those sold at FMG Premier Bull Sales are insured at the fall of the hammer for 14 days free.\* To find out more, call us on 0800 366 466 or visit [fmg.co.nz/bulls](http://fmg.co.nz/bulls)

\* Subject to standard underwriting criteria. Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at [fmg.co.nz](http://fmg.co.nz)

*We're here for the good of the country.*

**FMG**  
Advice & Insurance

## **EBV's**

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of **functional** animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc).

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Direct** = Direct Calving Ease—The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

**CE % Daughters** = Daughters' Calving Ease—The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sire for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of the dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV (kg)** is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Days to Calving EBV** (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicated a shorter interval from bull-in date to calving and therefore higher fertility.

**Carcase Weight EBV** (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 750 days.

**Eye Muscle Area EBV** (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 400kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

**Rib Fat and Rump Fat EBVs** (mm) are calculated from measurements of subcutaneous fat depth at the 12/13th rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 400kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 400kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV** (%) indicates genetic differences between animals for retail yield percentage in standard 400kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV** (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400kg carcass. Depending on market targets, larger more positive values are generally more favourable.

### **Selection Indices**

There are currently three different selection indexes calculated for New Zealand Angus animals. These are Self Replacing Index, AngusPure Index and Heifer/Dairy Terminal Index. Each selection index describes a different production/market scenario and relates to a typical commercial herd using Angus bulls. Producers are advised to use the selection index that most closely aligns to their production system. Each selection indexes is focused on efficient beef production, including maternal traits where appropriate. In addition, each selection index targets the following specifications.

**Self Replacing Index (SRI)** - Estimates the genetic differences between animals in net profitability per cow joined in an example self-replacing commercial herd that targets the production of grass finished steers. Steers are assumed marketed at approximately 480 kg live weight (265 kg carcass weight and 7 mm fat depth) at approximately 16 months of age. Selected heifers are retained for breeding and the balance marketed at approximately 16 months weighing 415 kg (230 kg carcass weight and 8 mm fat depth). As some daughters are retained, maternal traits are also of importance.

**AngusPure Index (API)** - Estimates the genetic differences between animals in net profitability per cow joined in an example self-replacing commercial Angus herd that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight and 10 mm fat depth) at approximately 20 months of age. Selected heifers are retained for breeding and the balance marketed at approximately 20 months weighing 450 kg (240 kg carcass weight and 10 mm fat depth). A significant premium for carcass quality was assumed and, as some daughters are retained, maternal traits are also of importance.

**Heifer/Dairy Terminal Index (HDT)** - Estimates the genetic differences between animals in net profitability per female joined in an example herd where all progeny are marketed. All progeny are marketed at approximately 510 kg live weight (280 kg carcass weight and 7 mm fat depth) at approximately 24 months of age.

The index values are derived using BreedObject technology. More information is available from the BreedObject Website. A full explanation of EBV's will be on display on sale day.

## NOTES

## NOTES

# Premier Bull cover

## **What is Premier Bull cover?**

All bulls auctioned at this sale up to the value of \$50,000 will automatically be covered under FMG's Premier Bull cover for 14 days at no cost to the purchaser.

## **Length of cover**

To extend cover for the specified bull beyond 14 days you need to tick Premier Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

## **Your bull's value**

Any bull covered under this policy must be purchased for \$50,000 or less. For any bull purchased over \$50,000 talk to an FMG representative.

## **During the period of insurance, the specified animal is covered for:**

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

## **What we will pay**

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

### **Disclaimer**

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.
