## HEREFORD NZ EBV's Explained

BREEDPLAN EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

### A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND HEREFORD SIRE

A BREEDPLAN Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

1. Identify the **New Zealand Hereford selection index** of most relevance to you.
2. **Rank animals** using the chosen selection index.
3. Consider the individual EBVs of importance.
4. Consider other traits of importance (e.g. visual assessment).

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online at [www.herefords.co.nz](http://www.herefords.co.nz) or [www.pivotdesign.co.nz/catalogues](http://www.pivotdesign.co.nz/catalogues).

### NEW ZEALAND HEREFORD BREEDPLAN

# GGP BOVINE 100K

The GGP Bovine 100K is a powerful tool for taurus-influenced cattle, that includes 100,000 SNP markers. With a 100K genomic profile, the GGP Bovine 100K provides accurate information on relevant production and recessive traits. This test measures the rate of genetic gain through increased breeding value accuracies.

This delivers more accurate evaluation of genetic merit, genome wide selection, comparative genetic studies, and higher density imputation. The GGP Bovine 100K includes the most informative content from popular lower density commercial arrays. Utilise the best content from the most commonly used commercial genotyping arrays, and for a low affordable price, plus comprehensive parentage, disease and trait relevant SNPs with the GGP Bovine 100K Test.

- *The GGP logo is displayed on all animals that have been SNP tested (with Neogen & PBB) and included in a Genomic Evaluation, therefore shows Genomics under Traits Analysed.*
- *All Neogen 100K tested animals have had parentage run by PBB DNA using the Helical system. This can include both sire and dam verification.*

# Angus NZ EBV's Explained

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. TACE information should always be used in conjunction with other selection criteria, including visual assessment.

## A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT ANGUS NEW ZEALAND SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

1. Consider the individual EBVs of importance.
2. Consider other traits of importance (e.g. visual assessment).
3. Identify the **Angus New Zealand selection** index of most relevance to you.
4. **Rank animals** using the chosen selection index.

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here [www.angusnz.com](http://www.angusnz.com).

## TRANSTASMAN ANGUS CATTLE EVALUATION

The Angus New Zealand Association publishes the following TACE EBVs and Selection Indexes. Please note that only EBVs from the same TACE analysis can be directly compared.

Growth EBVs	Fertility & Birth EBVs	Carcase EBVs	Other EBVs	Selection Indexes
Birth Weight	Scrotal Size	Carcase Weight	Docility	Self Replacing
200 Day Growth	Days to Calving	Eye Muscle Area		AngusPure
400 Day Weight	Gestation Length	Rib Fat		Heifer Dairy Terminal
600 Day Weight	Calving Ease Direct	Rump Fat		Scan below for more detail

# THE INDUSTRY STANDARD NOW HAS HIGHER STANDARDS.

**Angus GS is not resting on past accomplishments.  
There's more work to be done.**

With the addition of 22,000 SNPs, Angus GS becomes the unmatched Angus specific genomic profiler. It provides greater power for traits including calving ease, birth weight, marbling, female fertility and more.

Logo displayed on all animal lots that have been SNP tested and included in a Genomic Evaluation, therefore shows Genomics under Traits Analysed. All AngusGS 75K tested animals have had parentage run by PBB DNA using the Helical system. This can include both sire and dam verification.
