Conditions of Sale

1. The auction will be conducted under the Conditions of Sale laid down by the Stock and Station Agents Association.
 2. Each Lot will be at the risk of the Vendor until the fall of the hammer. Purchasers are strongly advised to insure cattle prior to transit.
 3. Finance terms are strictly cash prior to delivery unless credit arrangements have been made with the Auctioneer prior to sale.
 4. The entry of Bulls in this catalogue constitutes a guarantee of fertility. A Veterinary Surgeon's Certificate shall be produced by the Purchaser. Any dispute shall be settled by an Arbitrator appointed by the Auctioneer.
 5. Although all care has been taken to ensure accuracy of the information contained in this catalogue, no responsibility is accepted for any error or omission that might be contained herein.
 6. All Bulls are TB Accredited.
 7. The sale will be conducted exclusive of GST.
-

Fertility

The entry of a bull into this sale constitutes a guarantee by the vendor that the purchase price without interest, expenses, costs or damages shall be refunded in full if a bull proves totally infertile or incapable of service. If any bull entered does not possess a reasonable fertility although not totally infertile, any dispute shall be settled by an arbitrator appointed by the auctioneer and the vendor and a veterinary surgeons certificate will be requested.

Any complaint must be lodged with the auctioneers within 9 months of date of sale.

Structural soundness

Bulls are guaranteed to remain structurally sound ie Fit for mating for a minimum of **three seasons**. (This guarantee does not extend to include injury, disease or environmentally caused unsoundness.) Should a bull not meet this guarantee, the purchaser will be refunded a proportion of the purchase price depending on the number of seasons use obtained, and less the meat value at the time of purchase. The remaining value to be equally divided between the three years. As above refund will exclude interest expense and cost of damages.

Under no circumstances will the vendor enter any negotiations if they have not been given the opportunity to view the animal in question.

Any disputes shall be settled by an arbitrator appointed by the auctioneers and the vendor and a veterinary surgeons certificate will be requested.

Estimated Breeding Value (EBV) Explanation

BWT: Birth weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200: 200-Day Growth EBV (kg) is calculated from the weight of the animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of the progeny taken between 301 and 500 days of age, adjusted to 400 days and for dams age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of the progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 day weight of the daughters' calves.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight and is adjusted to 650 days of age. This is estimated from actual abattoir data where available, otherwise from correlation's to the growth traits.

EMA: Eye Muscle Area EBV (cm²) estimates differences in eye muscle area at the 12th/13th rib site of a dressed weight carcase. More positive EBVs indicate better muscling on animals.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12th/13th rib in a 300kg dressed weight carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed weight carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity. Two fat EBVs are listed as there is variation between animals regarding fat depth at two sites.

EBV Accuracy

The higher the accuracy % the lower the probable variation in performance from the stated figures.

Disclaimer

The South Devon GROUP BREEDPLAN Estimated Breeding Values contained in this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the South Devon Society of New Zealand Inc, nor the ABRI oversee this data. Neither ABRI, NZ South Devon Society or the vendor accept any responsibility for the use or interpretation of information on the animals included in this catalogue.

This sale will be hosted by bidr® (bidr.co.nz) as a HYBRID ON-FARM auction, with online bidding and a live-stream available for online purchasers.

All intending online purchasers must register with bidr® using an account held with one of the bidr® partner agencies in advance of the sale date.

The bidr® team is available to assist intending purchasers with signing up and registering – please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point.

Alternatively, contact your local bidr® representative:

Foreword

The Ipurua South Devon Stud was established in the late 70's with the purchase of a number of grade cows. It was developed into a predominantly English purebred herd through the addition of 12 cows in 1983 and 10 in 1994 from Woodah (J Holt) Blenheim. The original commercial component of the herd comprised of cows involved in an ongoing grade up programme originating from an Angus base in the late 70's.

Our commerical herd was inspected in 2012 with the greater majority being accepted to the South Devon Register. Performance data is now being added for the previously unregistered animals. This includes both weights for growth rate analysis and scan data for carcass trait analysis. This carcass data is crucial if we wish to balance the growth rate EBVs and produce a carcass that is worth hanging on the hooks and females that are winter friendly.

The 200 cow herd continues to be developed on our hill country property under strictly commerical conditions. The heifer component of the herd are calved as 2yr olds to South Devon sires. The herd calves October / early November to fit in with the overall commercial management of our operation. Whilst this decision to calve late obviously impacts on the animals age and hence size, it has absolutely no bearing on the individuals genetic make up.

Strong selection emphasis has been given to soundness, longevity, quality fleshing and temperament. Polling is also playing an increasingly significant role in our breeding programme, 85% of the 2024 calves were polled.

As always the majority of both the heifers and bulls are carcass trait scanned. This year we have not printed that data as the animals were scanned in November instead of just prior to sale. This is to obtain data before yearling mating decisions are made.

We welcome on farm inspection of all stock.

Thank you for your participation.

Peter & Caroline Foss

All cattle are T.B. Accredited (C10)

Sale bulls are tested BVD antigen negative and vaccinated.

As stated in the ABRI notes on EBVs, accuracies below 75% should be considered low.

There is an increasing number of performance evaluation options available to bull breeders and it is important to distinguish between them. EBV figures in this catalogue can **only** be compared to South Devon herds analysed by ABRI. **No** other comparisons are valid.
