

Oranga

ANGUS

5th Bull Sale

Thursday, 25th September 2025

12 noon, Rongotea Sale Yards

60 YEARLING BULLS

**Oranga Angus are raised on a 416Ha
hill country property in Apiti, Manawatu**

- * Easy Calving
- * Low birth weight
- * Docile temperament
- * Active/alert calves at birth
- * Tough durable cattle
- * Industry leading sires used

ENQUIRIES TO:

NZFL Agent - Darryl Harwood, M: 027 449 1174 or Vendor - Blair McCarroll, M: 027 247 7143

Sale will be livestreamed and on-line bidding available on [MyLivestock.co.nz](https://www.mylivestock.co.nz)

NZ FARMERS LIVESTOCK

Working with Farmers for Farmers

Here at NZ Farmers Livestock, we take pride in selling on behalf of Oranga Angus Stud, and are committed to working with farmers for farmers. We are proud to be working with Blair and his family and supporting their sale at the Rongotea Sale Yards on 26th September 2024.

We are pleased to advise that the Oranga Angus Bull Sale will be live streamed via MyLiveStock. For registration, or more information call 0800 695 483.

Our hugely popular Bull Plan option is tailor made for dairy farmers to purchase their bulls when cash is limited and repay when the bulls are sold through NZ Farmers Livestock Ltd.

We are 100% NZ owned and operated, and have a long-standing and established history in the livestock market. We are home to MyLiveStock, New Zealand's credible and evolving livestock network, a website and app providing clients with a livestock trading platform.

For all your livestock requirements, contact us today.

Oranga

ANGUS

5th Bull Sale - 25th September 2025 - 12 noon, Rongotea Sale Yards

60x Yearling Bulls

Light lunch and refreshments will be provided

FOREWORD

Welcome to our Oranga Angus R1 Bull Sale.

Oranga Angus have been farmed in Apiti, Manawatu for the past 17 years on our 416 ha Hill Country property in conjunction with our 2200 high performing ewe flock.

Breeding bulls for the dairy and beef industry with a focus on low birth weight and ease of calving. All calves weighed and tagged at birth. APR recorded with EBVs. Cows are calved behind a wire. Any bad temperament is culled. All heifers are calved as 2yr olds. Our female breeding cattle are tested under high stocking rates. We calve second week of September to match grass growth. Bulls are grown on grass and balayage only. In a cell grazing system.

This year's bulls have been "AI" to world leading sires to put more carcase IMF and growth into our cattle.

We stand by our bulls. Customer satisfaction is very important to us and we would look to resolve any issues quickly.

We would like to sincerely thank all those who have supported us over the years to get to this point. We look forward to seeing you at our sale.

Give me a call 0272477143 to discuss changes regards,

Blair, Fiona and family

HEALTH PROTOCOL:

- * Oranga Angus implements an 'industry best-practice', whole farm, animal health programme.
- * TB-Herd status C10
- * BVD- all bulls have been blood tested BVD antigen negative and been vaccinated with two shots of Hibrabovis. All bulls will require an annual Hibrabovis booster each September.
- * IBR- all bull are vaccinated two shots for IBR (with Hibrabovis)
- * 10-1 all bulls have received two shots 10-1
- * Leptospirosis – all bulls have had two shots 3 way lepto
- * Our cattle run in conjunction with a large, high-performing Ewe flock.

ATTENTION TO BUYER

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information

CONDITIONS OF SALE

- * GST – All lots are sold exclusive of GST.
- * Buyers Registration – A buyer's number will operate at the sale, therefore it will be necessary for all prospective purchasers to register prior to commencement of sale.
- * Faults – While all care & responsibility has been taken by the vendor & NZ Farmers Livestock, no responsibility can be taken for any errors or omissions. All animals sold in an as is where is condition, and any perceived faults cannot be readdressed by the above parties.
- * Insurance – All care will be taken with the cattle awaiting delivery but they become the responsibility of the purchaser at the fall of the hammer. Insurance strongly advised & representatives will be in attendance.
- * Conditions – Sale will be conducted under usual conditions as set by New Zealand Stock and Station Agents.
- * Inspection – Cattle available for inspection. Contact NZ Farmers Livestock or Vendors.
- * Selling Order – Vendors reserve right to alter lot order. The highest bidder for any lot shall be the purchaser. Should any dispute arise, the dispute may be settled by the auctioneer at his option, or the lot may be put up again & re-sold.
- * Rebate – 6% commission will be paid to all companies introducing purchasers prior to sale.
- * OSH – Visitors are reminded of OSH regulations and are requested to take all care and responsibility for all actions while on the property.
- * All bulls purchased must be uplifted on the day of the sale.

PARENT VERIFICATION SUFFIXES

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is as follows:

CALVING EASE			
CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.

GROWTH			
200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
MILK	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.

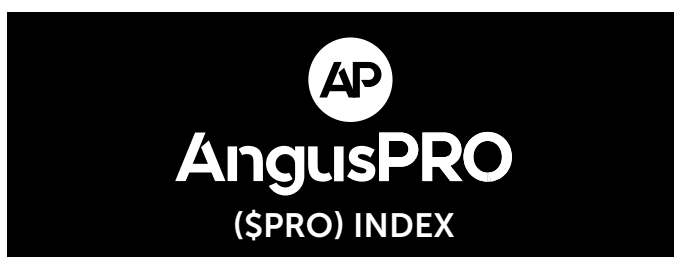

FERTILITY			
DC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.

CARCASE			
CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
RIB FAT	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
P8 (RUMP) FAT	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.

FEED/TEMPERAMENT			
NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.

STRUCTURE			
CLAW SET	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
FOOT ANGLE	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
LEG ANGLE	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate more desirable leg angle (straighter angle through the hock joint).

SELECTION INDEXES			
\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.

“A feature of the \$PRO index is a selection advantage of close to 0 for mature cow weight, meaning that selection on this index will maintain mature cow weight, while still increasing growth to 200, 400 & 600 days of age.”

ANGUS AUSTRALIA

The AngusPRO index (\$PRO) estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme.

Daughters are retained for breeding and therefore female traits are of importance.

Steers are assumed marketed at approximately 530 kg live weight (290 kg carcase weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.

SELECTION INDEX SUMMARY

- New Zealand production system.
- Self replacing herd.
- Daughters are retained for breeding.
- Steer progeny are finished on pasture for the AngusPure programme.
- Steer progeny slaughtered at a carcase weight of 290 kg at 20 months of age.
- Significant premium for steers that exhibit superior marbling.

Trait Contributions

Figure 1 shows the traits that are considered in the \$PRO index, and how much they contribute to the overall balance of the selection index. The larger the segment, the greater the impact on the selection index.

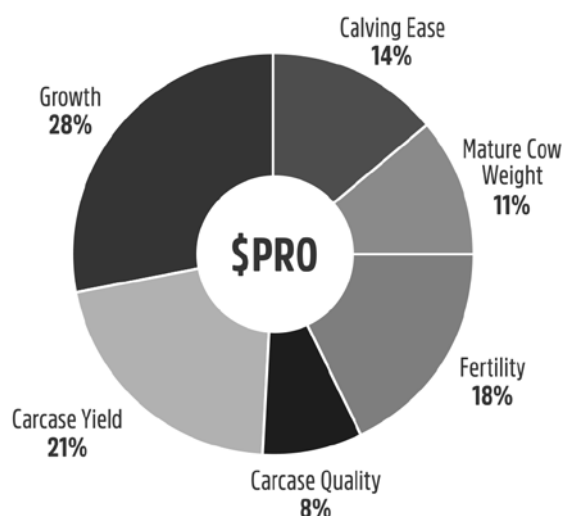

FIGURE 1: Trait Contribution to the AngusPro (\$PRO) Index

Selection Advantage

Figure 2 shows the selection advantage if animals are selected using the \$PRO index.

The selection advantage is calculated by ranking well used sires within the Angus breed on the \$PRO index, and comparing the average EBVs of the sires in the highest 10% with the average EBVs of all sires from which they were selected. For example, the sires ranked in the highest 10% based on the \$PRO index had 9 kg higher 400 Day Weight EBVs and 1.2 kg lower Birth Weight EBVs than the average EBVs of the sires from which they were selected.

The selection advantage is indicative of the long term direction and relativity of response that will occur in individual traits if selection is based on the \$PRO index. The actual response that is observed will vary depending on the features of the individual breeding program.

A feature of the \$PRO index is a selection advantage of close to 0 for mature cow weight, meaning that selection on this index will maintain mature cow weight, while still increasing growth to 200, 400 & 600 days of age.

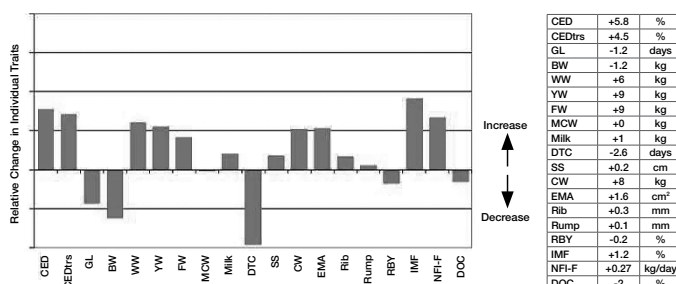

FIGURE 2: Selection Advantage for the AngusPRO (\$PRO) index

PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

DISCLAIMER:

The BREEDPLAN Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither the Angus Australia nor ABRI oversee or audit the collection of this data.

Everyone in the industry knows that profitability within a cattle system can be improved by making educated predictions with factual data.

It's scientifically proven.

AngusPRO are a group of New Zealand Angus studs that encompass over 40% of New Zealand's registered Angus cattle. These studs have united and made the shift across the ditch, to join the progressive governing body that is Angus Australia.

Angus Australia pride themselves on their quality of leadership in the delivery of innovative programs that will enhance and promote the value of Angus cattle and beef.
