Kia Toa Charolais

Another year has flown by and time for another foreword, so I am told. Never seems to be a dull moment either at Kia Toa or around the world. It has been a kinder year weather wise in the King Country with plenty of growth due to a steady supply of moisture. We have definitely had it better than a lot of places with the devastation that has come with one in hundred year weather extremes that seem to arrive every 4-5 months now adays.

We purchased Hemingford Uplander U106, in June last year. Being a polled, smooth coated, structurally very correct bull with a great temperament can only add to our studs future genetics. We have very high hopes and look forward to his first crop of calves on the ground this coming spring.

The first crop of bulls, sired by Hemingford Stockman S165, are up for sale this year with them all being out of first time calvers.

Once again we had a 60-40 split heifer wise meaning we have plenty of females to select from but could have done with a few more bulls to add to the sale. Ironically it is the other way around for next year.

What a tremendous year it has been for most farmers with the highest prices received for beef and lamb New Zealand has ever seen. Wool has even picked up but I wouldn't be changing my ute on those returns. The weaner prices have continued to soar so it appears there is a lot of faith in the beef industry and the Charolais breed seems to be leading the charge with growth rates, high yield an minimum time to achieve size and weight enabling farmers to cash in on these attributes.

All bulls have again been muscle scanned and tested for the homozygous polled gene (10 of the 31 bulls on offer carrying this gene). They have also been EBL and BVD tested clear and vaccinated – a booster is recommended prior to mating.

We are holding an Open Day Monday 11th May, 10am-2pm. Please feel free to come and check out the bulls on offer this year.

If you are unavailable to join us on sale day, our sale will be available online via Bidr – make sure you register.

Cheers, Paul

PLEASE BRING THIS CATALOGUE TO THE SALE

EBV'S EXPLAINED

BREEDPLAN EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND CHAROLAIS SIRE

A BREEDPLAN Guide to Interpreting EBVs helps producers understand how to assess and compare the genetic merit of animals. Each EBV is reported in the units in which the measurements are taken (e.g. Weight EBVs are reported in kilograms). Please note that *only EBVs produced in the same BREEDPLAN analysis can be directly compared.*

When interpreting BREEDPLAN EBVs, producers may:

- 1. Compare to the level of genetic merit within the current population.**

Comparing against the current levels of genetic merit (*breed average* and/or *percentile bands*) allows you to understand where an animal ranks within the evaluated population. *EBV percentile graphs* can be found online for each animal and provide a visual representation of where an animal ranks for each trait.

- 2. Compare expected difference in progeny performance.**

Comparing the expected difference in outcome if two (or more) different sires are used in a herd gives you an understanding of what these EBVs mean in real terms.

- 3. Consider EBV accuracy.**

As a general rule, animals should be compared on EBVs regardless of accuracy. Most rising two year old bulls will have similar EBV accuracy levels; however, there may be some variation (particularly at multi-vendor sales) due to levels of performance recording and/or progeny if the bull was used as a yearling.

The searchable version of this catalogue can be found online www.charolais.net.nz/ or www.pivotdesign.co.nz/catalogues

NEW ZEALAND CHAROLAIS BREEDPLAN

Charolais Breeders New Zealand publishes the following BREEDPLAN EBVs:

Calving Ease Direct (%): Higher (or more positive) CEDir EBVs indicate that two year old heifers will have less difficulty when calving this sire's progeny.

Calving Ease Daughters (%): Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at two years of age.

Gestation Length (days): Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

Birth Weight (kg): Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

200, 400 & 600 Day Weight EBVs (kg): Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

Mature Cow Weight (kg): Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

Milk (kg): Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

Scrotal Size (cm): Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

Carcase Weight (kg): Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

Eye Muscle Area (sq. cm): Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

Rib and Rump Fat EBVs (mm): Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

Retail Beef Yield (%): Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat (%): Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

More information, including EBV descriptions and how to use them, can be found in the **Using & Understanding BREEDPLAN EBVs** booklet. Scan the QR code for more details.

CONDITIONS OF SALE

1. The auction will be conducted under the Conditions of Sale laid down by the Stock and Station Agents Association.
2. All bulls are guaranteed breeders. If there are any claims made against the bulls, they should be made in writing within 7 months of the sale and accompanied by a Veterinary Certificate. Should the Bull fail to breed to a satisfactory level this animal will either be replaced with an animal of comparable value or a credit given at the following sale. This does not include interest, expenses, costs and damages.
3. All Bulls are sold with a 2 season Foot Guarantee which guarantees they will be capable of natural service for a minimum of 2 seasons. This guarantee only covers faults due to poor conformation and does not cover obvious negligence on the part of the purchaser or faults due to injury or abscess. Any claims must be made in writing and accompany a Veterinary report within 14 months of sale. Remuneration will be made in the form of either a replacement animal or credit at the next years sale on a pro rata basis, to the amount of use received by the purchaser, with the Bull being returned to Kia Toa Charolais. This guarantee does not include interest, expenses, costs or damages.
4. Bulls are to be trucked for delivery by the purchaser as soon as possible after the sale. If required Bulls may be held at the Vendors properties for up to 10 days after sale at the Purchasers Risk.
5. Insurance is recommended as each lot shall be at the risk of the Purchaser at the fall of the hammer.
6. Any dispute shall be settled by an arbitrator appointed by the auctioneers.
7. Kia Toa cattle are fully recorded and transferable within Charolais Breeders New Zealand
8. All Bulls are TB Accredited.
9. The Sale will be conducted exclusive of GST.
10. PURCHASING REBATE - All intending purchasers are required to register at the sales office prior to the sale. A purchasing

rebate of 5% will then be paid to non-participating livestock companies and recognized independent livestock agents with approved credit facilities introducing new and/or accompanying buyers to the sale. Arrangements must be made prior to the sale and settlement made on the purchaser's behalf within 14 days.

11. Although all care has been taken to ensure accuracy of information contained in this catalogue, no responsibility is accepted for any error or omission that might be contained herein.

Zoetis - New HornPoll Test

The Horn-Polled test determines whether phenotypically polled animals are heterozygous or homozygous polled. The accuracy of the Zoetis HornPoll test in Charolais is 90%. In *Bos taurus* breeds (like Charolais), polled is almost always dominant to horned; Homozygous polled animals are always polled and heterozygous animals are usually always polled (they are sometimes scurred).

When a Homozygous polled bull is joined to a mob of cows, regardless of cow horned/polled status, all progeny will be polled or scurred. If the dam is horned these offspring will carry a copy of the horned gene inherited from their mother, if the dam is polled also then the chance of the resulting offspring carrying the horned gene is significantly reduced.

Amy Hoogenboom BVSc
Genetics Area Manager - Beef

ZOETIS LEADING INNOVATION IN ANIMAL HEALTH FOR OVER 75 YEARS

Scur Explanation

Scurs are incompletely developed horns that are usually smaller and attached only to the skin (not skull). While the inheritance patterns of horn versus poll are relatively well established, scurs are proving to be more complex and likely involve multiple genes in a manner similar to most production traits. Scurs can only be found in cattle that are genetically polled (either heterozygous or homozygous poll) and preliminary studies suggest they are more common in males and heterozygous poll animals. Unlike horns, scurs can also develop in older animals.

48 FMG Premier Bull Sale Insurance Form

What is FMG Premier Bull Insurance?

On receiving a completed FMG Premier Bull Sale Insurance form from an existing FMG client, FMG provides insurance cover for bulls including theft, death caused by certain accidents, injury, disease, illness or humane destruction and permanent infertility, provided the bull's purchase price does not exceed \$50,000 +GST. Please contact an FMG representative if you are not an FMG client, or you purchased a bull for over \$50,000+GST.

What is the length of cover?

Your specified bull(s) can be insured for up to 12 months on FMG Premier Bull Sale Insurance.

What are the benefits?

✓ <i>Infertility</i>	Cover if your specified bull has to be intentionally slaughtered due to permanent infertility caused by certain accidents, disease, or illness.
✓ <i>Theft or death</i>	Cover for your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ <i>Vet costs</i>	Cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

FMG
Advice & Insurance

BULL-PROOF

YOUR ASSETS AGAINST RURAL THEFT.

Theft and burglaries occur more often than you think, and the number of theft claims is increasing.

Every year FMG supports over 1,000 families impacted by theft and burglary. Alarmingly, 1 in 5 clients at rural addresses have been targeted more than once in the same year!

We think now's the time to put a lock on that trend. We have teamed up with NZ Police to create a Rural Crime Prevention Guide to help prevent theft and burglaries at your rural property – find out more at fmg.co.nz/rural-theft

We're here for the good of the country.
