FOREWORD

It is with great pride that we welcome you back to Tarangower for our 80th Annual Bull Sale celebrating 100 years of breeding Angus cattle.

This milestone represents a legacy that began in 1926 with my grandfather Les Purdie. For nearly a century, our family has remained dedicated to the betterment of the Angus breed, evolving from walking bulls 66kms to the Te Kuiti saleyards to the modern hybrid auctions we host today.

Our breeding philosophy at Tarangower is simple: "Grass, Grit and Generations." Our cattle are bred under genuine hill country conditions in Mahoenui with no pampering and no supplements other than hay. We believe that if they can't thrive on the hard hills, they don't belong in the herd.

Tarangower runs 200 stud cows and 1150 Perendale breeding ewes under commercial conditions. Bounded by the Mokau River we farm 1150 acres effective and winter approx 9 su per hectare. All stock are fattened at Tarangower and each year we carefully select and retain 40-45 heifers to include in our herd. Our winters can be very wet and long with average rainfall 70-801 inches per year.

What you can expect from this year's sales bulls:

- Structural Integrity:** Every bull has been selected for sound conformation, a strong head and jaw, and four good feet to ensure longevity in any environment.
- Proven Temperament:** We maintain a rigorous culling procedure; a quiet, easy-going nature is a non-negotiable priority for us.
- Maternal Excellence:** Our 180 stud cows must raise a calf annually from three years of age, or they are culled. This ensures the bulls you buy carry the genetics of fertile, hardworking dams.

We invite you to join us on the farm at 912 Ngatarawa Road to inspect this year's line-up. For those unable to attend in person, the sale will again be livestreamed via [with BIDR & MYLIVESTOCK](#)

Thank you for your continued support of Tarangower Angus. We look forward to seeing you on sale day and catching up over refreshments afterwards.

CONDITIONS OF SALE

1. All lots sold EXCLUSIVE OF GST
2. Each lot becomes the property of the purchaser at the fall of the hammer.
3. Delivery – is free of charge to North Island locations. Bulls will be delivered as soon as transport can be arranged.
4. Although all care has been taken to ensure accuracy of the information contained in this catalogue, no responsibility is accepted for an error or omission that might be contained herein.
5. We reserve the right to change the catalogue order at any time.
6. Purchasing Rebate – all intending purchasers MUST register at the sales office prior to the sale. A purchasing rebate of 5% will be paid to the non-participating livestock companies and recognized independent livestock agents with approved credit facilities introducing and/or accompanying new buyers to the sale. Arrangements must be made with the Auctioneer prior to the sale and settlement made on the buyers behalf within 14 days of sale.
7. OSH – Tarangower Angus, their staff and the Auctioneers on the day of the sale will take every effort to ensure the safety of buyers and visitors. However this is a farm run under normal management conditions and certain dangers exist in relation to the livestock and environment. All visitors should take all care to ensure their personal safety.
8. This sale will be hosted by BIDR & MyLivestock as a HYBRID auction with online bidding and live-stream available on sale day as well as the normal on-farm format. We recommend all on-line purchasers register in advance of our sale date

DISCLAIMER:

The TransTasman Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither the AngusNZ nor ABRI oversee or audit the collection of this data.

TARANGOWER ANGUS GUARANTEE

- C10 TB status – Herd tested April 2023
- All bulls BVD tested. Bulls have been vaccinated twice for BVD, 8n1 and Lepto. (25/07/2025).
- All bulls are free from the 4 genetic defects AMFU, NHFU, CAFU and DD by virtue of their pedigree or have been tested. We have been thorough in going through our herd and are happy that none of our cattle carry any of these genetic conditions.
- All calves are weighed at birth and all bulls sold at sale data performance recorded and carcass scanned.
- Bulls are farmed under strict commercial conditions and are not over fed nor fed anything other than grass and/or hay/silage during their first winter and for a few weeks leading up to sale day.
- Tarangower is a family owned and run business and have been selling quality bulls for 97 years.

FERTILITY AND STRUCTURAL GUARANTEE

- All bulls in this catalogue are guaranteed fertile and structurally sound for breeding purposes for 3 years and have been fertility tested by Viabull Ltd. (please see report in this catalogue.)

Conditions of Guarantee:

- Notice of infertility or unsoundness in any such case must be advised to the vendor as soon as possible. We will refund the purchase price of the bull, value decreasing by 1/3rd each year. This been without interest, expenses, costs or damages, and also taking into account salvage/killing income.
- A Veterinary Certificate will be required.
- Any dispute shall be settled by an arbitrator appointed by the Auctioneers .
- The purchaser shall throughout the guarantee period provide the bull has proper care and attention and make sure he is maintained in good health and condition.
- Purchaser to keep BVD vaccinations up to date – yearly.
- Purchaser must notify vendor prior to disposal of bull unless for humane reasons.

Fertility Testing Report

All Bulls at Tarangower Angus

Has passed a fertility test and have Viabull semen satisfactory for breeding potential. The bulls have passed the following:

1. Palpation and examination of testicles
2. The penis and sheath have been examined for any apparent abnormality e.g. sores, lacerations, abscesses, hair rings, warts, corkscrew, scar tissue and signs of damage
3. Microscopic evaluation of the semen sample has been tested for motility % of live sperm morphology % of normal vs abnormal within the sperm

All bulls have been presented to me in good condition and in a healthy state.

Darren Williams
Manager

Unlock the Power of Genomics

Get the genetic insights you need to make smarter breeding decisions, reduce risk, and maximise herd potential with the genomic profiling options available through PBB.

ANGUSGS
Powered by Neogen

Look for this logo on sale lots— it shows that the animal has been DNA profiled using a SNP-based test and has been included in a genomic evaluation. You will also see “Genomics” listed under its “Traits Analysed”.

VERIFIED GENETICS, CONFIDENT DECISIONS, STRONGER HERDS

- Make smarter selection decisions — gain genetic insights earlier in an animal's life.
- Market with confidence — provide buyers with verified genomic data.
- Strengthen herd linkages — enhance connections within the reference population.
- High-density SNP profiling — for targeted genetic analysis.
- Trusted parent verification — conducted in-house by the PBB DNA team.

**Power your breeding program with genomics
— because better data leads to better cattle.**

MANAGING BVD IN YOUR HERD

BVD is a Pestivirus that infects cattle, usually between the ages of 6 months and 2 years.

The main impact of BVD is on breeding animals.

How do cattle contract the virus?

- The virus is spread by direct contact with an infected animal.
- A Persistently Infected Carrier (PI) animal is born after their mother is infected for the first time with the BVD virus, between 1 & 4 months of pregnancy.
- All calves born to PI animals will be PI's themselves.

Is BVD treatable?

The disease is not directly treatable. In normal healthy animals, BVD is usually a short lived disease, which the animal recovers from by itself.

- Normal healthy animals may scour for a few days and experience a check in growth rate.
- Bulls may be temporarily infertile.
- Pregnant cows or heifers, depending on the stage of pregnancy may show empty, abort the foetus, give birth to weak, sickly or deformed calves, give birth to PI carrier animals or give birth to a normal antibody positive calf.
- PI carrier animals often appear normal until they develop 'mucosal disease' (fever, ulceration of gums, oesophagus and entire digestive tract). Mucosal disease in PI animals is always fatal and all PI animals should be culled as soon as they are identified.

The only way to determine the BVD status of your herd is by blood testing. Discuss options with your vet.

To protect your herd against BVD it is advised to bring in no outside animal unless it has been tested clear of the BVD virus. This is particularly true of breeding bulls. Most stud breeders have BVD programmes in place and do pre-sale BVD/EBL testing. Always check before you purchase a bull. To avoid temporary infertility in your sires if exposed to BVD while out with the cow, always give them a booster vaccine prior to mating.

GENETIC DEFECTS IN ANGUS

Arthrogryposis Multiplex (AM) and Neuropathic Hydrocephalus (NH)
Contractural Arachnodactyly (CA)

AM, NH and CA are simple recessive gene defects, caused by the presence of a single pair of inherited genes. The red gene in Angus cattle is a common example of recessive inheritance—the gene must be present on both sides of the pedigree for full expression.

If a carrier sire and a carrier dam are mated, 25% of the progeny will be clear of the defect, 50% will be carriers, and 25% will be affected.

A DNA test has been developed to identify earlier animals so these defects can be eliminated from the breed.

After such DNA testing, you will be given one of two results;

AMF, NHF or CAF = tested free of the gene

AMC, NHC or CAC = tested carriers of the defect.

But, to assist with the identification of carrier animals (prior to DNA testing) a 'probability test' has been developed -using updated test results and animals' pedigrees, known as Geneprob. Geneprob will identify 'at risk' animals in the breed database and assign them a status for AMS or NHS as follows;

AMFU, NHFU and/or CAFU = free by pedigree inference, untested

AMS %, NHS% and/or CAS% = a suspected carrier (% = level of suspicion) but un-tested. Requires testing to validate true status.

AMF, NHF and/or CAF = tested free of the defect

AMC, NHC and/or CAC = tested carrier of the defect.

These GeneProb analysis tests are performed every seven days. Genotyping for these mutations should, with 100% accuracy, expedite elimination of these genes from the Angus population. If you are unsure of any aspect of these genetic defects please enquire of your bull supplier or ring the NZ Angus Association on 06 3234484.

Caring For Your New Bull

At Tarangower the bull you select has been running with other young bulls. When he arrives at your home, make sure you have cows or steers at the yard to put him with as this will help settle him – remember the last few days have probably been a very scary time.

He will be used to good quality hay. Caring for your bull, especially the first twelve months, will ensure that he will mature into a good strong sire.

HERITABILITY OF TRAITS IN ANGUS GROUP TACE (TRANSTASMAN CATTLE EVALUATION)

Only part of the variation that we observe among animals is due to genetic differences. The majority of the variation is generally due to non-genetic factors such as differences in environment and nutrition.

The degree to which genetic differences influence performance varies from trait to trait. This is explained by differences in the “heritability” of the traits.

Growth and carcass traits tend to have moderate to high heritabilities (i.e. 20 to 60%), whilst maternal traits have low heritabilities (10% or lower).

The TransTasman Angus Cattle Evaluation takes into account the different degrees of heritability of various traits, and the known genetic relationships between the traits.

- The amount of genetic influence in a trait.
- The amount of environmental (non-genetic) influence in a trait.

VISUAL APPRAISAL IS STILL VERY IMPORTANT FOR SELECTING BULLS

- **MASCULINE TRAITS** - A strong head, jaw and thick neck indicate high levels of libido, testosterone and reproductive efficiency.
- **NECK LENGTH** - A thick necked animal matures and reaches puberty earlier and has more libido. A longer neck indicates a higher maintenance animal that is slower to reach puberty and rebreed.
- **HEART GIRTH** - larger heart girth is an indicator of vigor and easy keeping ability. Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well.
- **STRUCTURAL SOUNDNESS** - Feet and bone- Hill country cattle cover large distances over rugged terrain so a strong skeleton is essential.
- **REPRODUCTIVE** - A tight sheath, good sized and shaped testicles are essential.
- **FLANK** - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency. Higher flanked animals tend to be higher maintenance and take longer to finish on grass.

ANGUS NZ EBV'S AND SELECTION INDEXES

EBVs and Selection Indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) to provide the best measure of an animal's genetic merit.

To ensure the accuracy of EBV and Index data, Angus NZ combine with Angus Australia to create a reference population known as the TransTasman Angus Cattle Evaluation (TACE).

By using TACE – along with visual and structural appraisal – will assist in creating a balanced phenotypical and genotypical breeding outcome.

SELECTING YOUR NEXT ANGUS NZ SIRE

1. Consider your individual EBVs of importance
2. Consider other traits of importance (e.g. visual assessment)
3. Identify the Angus NZ selection index of most relevance to your breeding programme
4. Rank animals using the chosen Selection Index.

The majority of these steps can be undertaken online at www.angusnz.com, allowing you to generate a shortlist of bulls ahead of sale day. Alternatively Beef & Lamb Genetics have developed a new tool to make it easier to find the best bulls for your farming operation. Using a series of buttons and sliders, you refine your breeding objectives, then click a button and nProve generates a list of bulls that best fit. It's free to use, there's no need to register and there's also helpful tips to get started.

Try it out at
www.nprove.nz

Angus NZ Selection Indexes

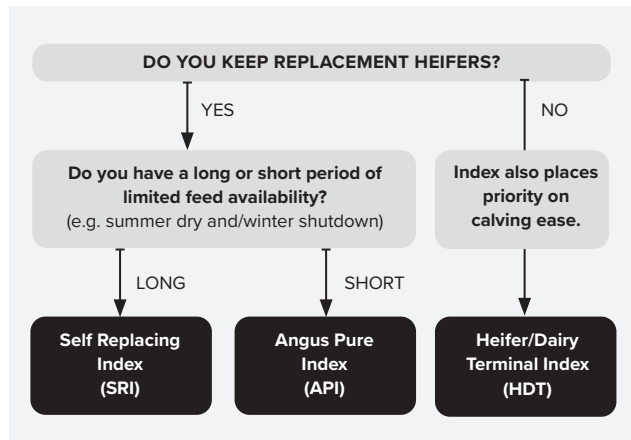

Angus NZ currently has three different selection indexes. These are:

1. Self Replacing Index
2. AngusPure Index; *and*
3. Heifer/Dairy Terminal Index

Each selection index is reported in units of net profitability/cow mated (\$), and relates to a commercial herd using Angus bulls. Each index is focused on efficient beef production, including maternal traits where appropriate.

For more detail click on the QR code or visit –
breedplan.une.edu.au/media/bqjbnnbh/using-new-zealand-angus-selection-indexes.pdf

Angus NZ Individual EBV's – Please note: Only EBVs from the same TACE analysis can be directly compared.

GROWTH

200, 400 & 600 Day Weight EBVs (kg) – Larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

Mature Cow Weight (kg) – Larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

Milk (kg) – Higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

FERTILITY & BIRTH

Calving Ease Direct (%) – Higher (or more positive) CEDir EBVs indicate 2 year old heifers will have less difficulty calving this sire's progeny.

Calving Ease Daughters (%) – Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at 2 years.

Gestation Length (days) – Lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

Birth Weight (kg) – Lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

Days to Calving (days) – Lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval date to calving.

Scrotal Size (cm) – Larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

CARCASE

Carcase Weight (kg) – Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

Eye Muscle Area (sq. cm) – Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

Rib and Rump Fat EBVs (mm) – Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

Retail Beef Yield (%) – Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat (%) – Higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

OTHER EBVS

Docility (%) – Higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

Research Breeding Value (RBV) Definitions

Hip Height RBV

Hip Height RBV estimates genetic differences in skeletal frame size, measured at the hip. Taller animals generally have a larger mature frame size and higher growth potential but may also have greater maintenance requirements. This trait is useful for managing frame size within a herd to match production system and market targets.

Body Condition Score RBV

Body Condition Score RBV estimates genetic differences in body condition score, reflecting the amount of fat cover and energy reserves an animal carries. Higher values indicate animals whose progeny are expected to maintain greater body condition. BCS is an indicator of metabolic efficiency and resilience, with implications for fertility and cow longevity.
