# Welcome to the 2026 Rolling Rock Bull Sale Catalogue.

## Thank you once again to all who supported our sale last year and helped make it such a success—your ongoing support means a great deal to us and our program.

As we compile this year's offering, it's pleasing to do so off the back of continued strength in the beef sector. Global demand for New Zealand grass-fed beef remains strong, with both prime and store markets reflecting very healthy commodity prices and reinforcing the value of well-bred, efficient cattle within hill country systems.

This year's calf crop has certainly had to earn its place. They came through a challenging autumn and cold spring, before benefiting from a tremendous summer and autumn. We feel this has been a good test of their constitution and doing ability—traits we place a lot of emphasis on in our program.

The 2026 lineup features a strong mix of proven and emerging genetics, headlined by Ellingson Prolific. It is not often you see the numbers translate to paddock performance as clearly as we did with Prolific—his 200-day BV sits well within the top 1%, and the average weaning weight of his calves was 29kg above any other sire in the 2024 drop. More importantly, he is stamping his progeny with consistency—depth, thickness, structural integrity, and that strong maternal backing

that underpins fertility and longevity. Alongside this, you will see the influence of S Right Time 7861, a sire we have used to inject real power, muscle, and functionality, while still maintaining the maternal strength and doing ability required in a commercial environment. Also prominent through the draft is Rolling Rock 22127, a standout Kaharau Prince P395 son who sold to Kincardine Angus for stud duties, and is leaving a consistent line of bulls with balance, constitution, and strong reproductive traits.

As always, the lineup is underpinned by our Rolling Rock cow families—cattle bred with a focus on structure, fertility, temperament, and the ability to perform under pressure in real-world conditions.

If you have any questions or would like to inspect the bulls prior to sale day, please don't hesitate to get in touch. Otherwise, we look forward to seeing you on sale day at Rolling Rock.

Kind regards,  
John & Sarah

# Conditions of Sale

The sale will be conducted in accordance with the conditions as set down by the New Zealand Stock and Station Agents Association. A copy will be posted at the Sale.

Each lot will become the property and responsibility of the purchaser at the fall of the hammer.

## **Purchasing Rebate**

All intending purchasers are required to register at the sales office prior to the sale. A purchasing rebate of 6% will then be paid to non-participating livestock companies and recognised independent livestock agents with approved credit facilities introducing and/or accompanying buyers to the sale. Arrangements must be made prior to the sale and settlement made on the purchaser's behalf within 14 days.

## **GST**

All lots are sold exclusive of GST.

## **NAIT Number**

12623518

## **Delivery**

Delivery is offered free of charge to the nearest sale yard centre for a period of three weeks following sale day, within the North Island. The vendor reserves the right to arrange cartage on days suitable to them.

## **Insurance**

We recommend purchasers insure their bulls on the day of the sale. An insurance agent will be available on the day.

## **Instructions**

Purchasers are to leave full instructions using the delivery sheet attached at the back of the catalogue

## **Disclaimer**

Although all care has been taken to ensure the accuracy of the information contained within this catalogue, no responsibility is accepted for any error or omission that may have occurred

## **Health and Safety**

Every effort will be taken by the vendors, auctioneers, their staff and assistants on the day of the sale and for any visits to inspect prior to sale day, to ensure the safety of all intending buyers and visitors. However, under the Occupational Health and Safety Act 1992, we are required to advise you of possible hazards:

- Cattle movements
- Vehicles and Machinery
- Cattle yards, slippery surfaces
- Electric fences
- Pavilion and seating
- Cooking areas

# Guarantee of Fertility

The entry of a bull in the catalogue ipso facto carries with it an undertaking by the vendor that the purchase price (without interest expenses, costs or damages) will be refunded should the bull prove totally infertile, or incapable of service. Such a refund will be by the way of credit at the following sale. If a bull so entered should not possess a reasonable fertility, although not totally infertile contact the vendor to discuss resolution. If resolution cannot be agreed any dispute shall be settled by an arbitrator appointed by the auctioneers and the reward of such arbitrator shall be accepted as final and binding by the parties of the dispute. The costs of arbitration shall be borne as ruled by the arbitrator. A veterinary surgeon's certificate in the form prescribed by the auctioneers shall be procured by the purchaser and submitted to the arbitrator if required by them. The undertaking is limited to the individual value of a bull as a breeder and does not extend to the loss of profits or otherwise sustained in the event of infertility or non-capacity being proved. The undertaking shall bind the executors or administrators of the vendor.

## The following conditions will apply:

- a) In the case of a bull, any complaint must be lodged by the purchase with the auctioneers in writing within 12 calendar months from the date of sale
- b) TRIAL PERIOD: In every case a trial period of twelve calendar months from the date of sale must be allowed to test the fertility of the bull
- c) The incapacity due to injury from whatsoever the cause or to illness or disease suffered or contracted after the date of sale is not covered by the guarantee
- d) That the purchaser throughout the guarantee period give the bull full and sufficient opportunity to prove that he is a good server and stockgetter or to demonstrate his ability to get stock whichever the case may be
- e) The purchaser shall throughout the trial period ensure that the bull has proper care and attention and is maintained in good health and condition
- f) Failure on the part of the purchaser to observe or perform the foregoing conditions or any of them shall render the undertaking void

# Health

The foundation cows purchased from the Springdale dispersal were carefully assessed for udder attachment, teat size, feet and temperament prior to purchase and we continue to cull any animals not meeting our high standards.

All Rolling Rock bulls have been examined by Darren Williams of Viabull. The examination included:

- Physical exam of external and internal sex organs
- Microscopic examination of semen collected by electroejaculation
- Measurement of scrotal circumference was carried out at 400 days
- All bulls have been tested negative for BVD and are also vaccinated so they are protected in the event they come into contact with the BVD virus once leaving Rolling Rock. This provides the maximum protection.
- The bulls have all received general health treatments including 10 in 1 vaccination, a drench and lice pour on.
- Rolling Rock is Brucellosis free and TB accredited with a C10 Status.

# Genetic Testing

You will notice that all bulls in our catalogue have a (PV) suffix at the end of each animal's name. This indicates that both SIRE and DAM have been verified by DNA. The entire Rolling Rock cow herd has been HD50K genomically tested through Zoetis and have genomically enhanced Breedplan EBVs. We have also tested HD50K tested all progeny at the time of parent verification. Therefore, all bulls in the catalogue also have genomically enhanced Breedplan EBVs. All sale bulls are free by pedigree from all genetic defects.

# Completeness of Performance Recording

The "Completeness of Performance Recording" herd rating system assesses the quantity of pedigree and performance information that has been submitted to BREEDPLAN by an individual seedstock herd.

Herds with a star rating of "5" are gold standard. They are considered to be recording "complete" performance information with BREEDPLAN for all animals across all traits for which EBVs are available.

0272880980

03/04/2026

## Fertility Testing Report

All Bulls at Rolling Rock Angus

Has passed a fertility test and have Viabull semen satisfactory for breeding potential. The bulls have passed the following

1. Palpation and examination of testicles
2. The penis and sheath have been examined for any apparent abnormality e.g. sores, lacerations, abscesses, hair rings, warts, corkscrew, scar tissue and signs of damage
3. Microscopic evaluation of the semen sample has been tested for motility % of live sperm morphology % of normal vs abnormal within the sperm

All bulls have been presented to me in good condition and in a healthy state.

Darren Williams  
Manager

## ANGUS NZ EBV's Explained

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

### A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND ANGUS SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

#### Which New Zealand Angus Selection Index should you use?

1. Identify the **Angus New Zealand selection** index of most relevance to you.
2. **Rank animals** using the chosen selection index.
3. Consider the individual EBVs of importance.
4. Consider other traits of importance (e.g. visual assessment).

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here [www.angusnz.com](http://www.angusnz.com).

## TRANSTASMAN ANGUS CATTLE EVALUATION

A TACE Guide to Interpreting EBVs outlines how to assess and compare the genetic merit of animals. Please note that only EBVs from the same TACE analysis can be directly compared. The New Zealand Angus Association publishes the following TACE EBVs:

**Calving Ease Direct (%):** Higher (or more positive) CEDir EBVs indicate that two year old heifers will have less difficulty when calving this sire's progeny.

**Calving Ease Daughters (%):** Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at two years of age.

**Gestation Length (days):** Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

**Birth Weight (kg):** Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

**200, 400 & 600 Day Weight EBVs (kg):** Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

**Mature Cow Weight (kg):** Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

**Milk (kg):** Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

**Scrotal Size (cm):** Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

**Days to Calving (days):** Bulls with lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval from bull-in date to calving.

**Carcase Weight (kg):** Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

**Eye Muscle Area (sq. cm):** Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

**Rib and Rump Fat EBVs (mm):** Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter

progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

**Retail Beef Yield (%):** Bulls with higher (or more positive) RBV EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat (%):** Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

**Docility (%):** Bulls with higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

For more information on **using and understanding TACE EBVs & information**, including the BREEDPLAN Guides, scan the QR code.  
<https://breedplan.une.edu.au/media/dtqpdm34/using-and-understanding-breedplan-ebvs.pdf>

## SELECTION INDEXES

The New Zealand Angus Association currently reports three different selection indexes. These are the:

- Self Replacing Index
- AngusPure Index
- Heifer/Dairy Terminal Index

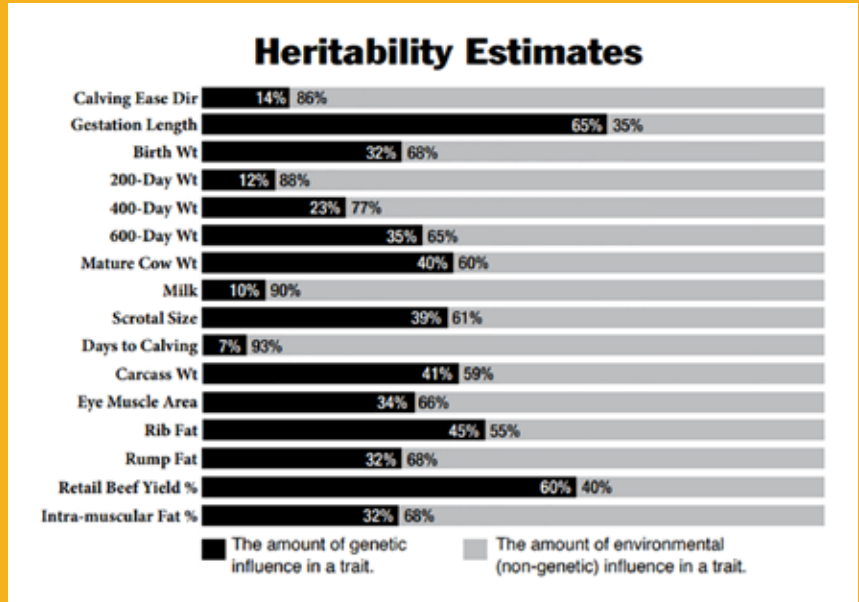

Each selection index is reported in units of net profitability per cow mated (\$), and relates to a commercial herd using Angus bulls. Each selection index is focused on efficient beef production, including maternal traits where appropriate. Scan the QR Code for more detail.

<https://breedplan.une.edu.au/media/bqjbnbh/using-new-zealand-angus-selection-indexes.pdf>

# Heritability of Traits in Angus

Only part of the variation that we observe among animals is due to genetic differences. The majority of the variation is generally due to non genetic factors such as differences in environment and nutrition. The degree to which genetic differences influence performance varies from trait to trait. Growth and carcass traits tend to have moderate to high heritabilities (i.e. 20 to 60%), whilst maternal traits have low heritabilities (10% or lower).

# Why buy a HD50K-tested bull?

1.

## His Breeding Values are very accurate

A young bull that's been HD50K tested has highly accurate BVs. You can therefore be more confident that his performance will match his figures.

2.

## You'll make faster production gains

The bull you buy this season will influence your herd for the next 8-10 years. By buying an HD50K-tested bull, your decision is based on the best information possible.

3.

## Boost the performance of your beef cow herd

If you breed your own heifer replacements, using a HD50K-tested bull means you can tap into "HeiferSELECT®". HeiferSELECT® provides the objective information you need to make more accurate decisions about which heifers to "keep or cull". It draws on maternal, growth and carcass (including marbling) traits.

**If you're a progressive farmer, you can't afford not to buy a HD50K-tested bull. He will get you where you want to go, faster. Much faster.**

## Comments

Ellingson Prolific is a true power sire that has made a significant impact across the Angus breed, highlighted by him being ranked the No. 3 bull for US registrations in 2025. Prolific has established himself as a 'high customer satisfaction' type sire where he combines a strong, three-dimensional phenotype—thick, deep, and structurally sound—with outstanding maternal backing through his dam EA Queen 8070, a proven "power cow" pathfinder donor dam, admired for her udder quality, fertility and her structural integrity! Prolific consistently stamps his progeny with growth, capacity, and muscle, while maintaining the structural integrity- he ranks top 1% for foot angle and 10% for claw with a number of progeny analysed in the US and brings quiet disposition required in real-world systems. Prolific is a sire that brings together performance, maternal strength, and consistency—exactly the type to shift the dial without compromising the fundamentals. Not every sire has the ability to translate numbers to paddock performance as clearly as we have seen with Prolific. His 200 day EBV sits well ranking in the top 1% (as does 400 day and 600 day weights) and the average weaning weight of his calves at Rolling Rock was 29kg above any other sire for the 2024 drop. He also brings huge carcass weight at +102 kg and all this combines to inject some 'real time' performance into any program his sons are utilised in!

Comments

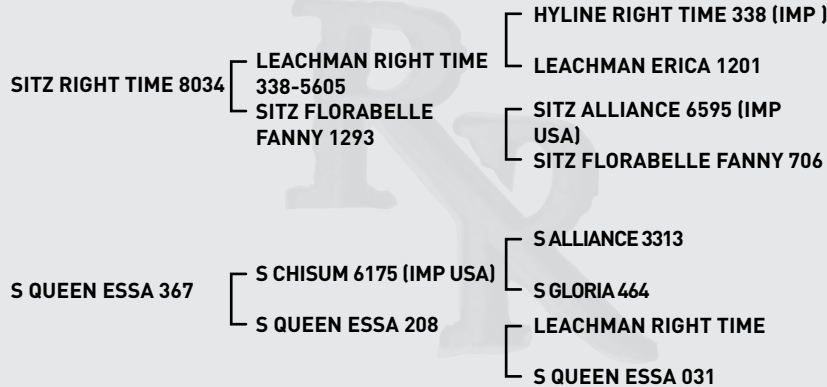

Rolling Rock 22127 is a cracking Kaharau Prince P395 son who set the tone for our 2024 offering, going on to sell to Kincardine Angus for stud duties at \$17,000. He brings a complete, no-compromise package—super temperament, natural softness, and a standout phenotype, backed by plenty of ‘engine room’, strong feet and legs, and that in-built constitution we value. On paper, he complements what you see in the flesh, with a well-balanced data set—strong growth, a Milk BV of +20 (top 15%), and key fertility traits that rank highly, including Scrotal Size (top 5%) and Days to Calving (top 15%), all critical drivers of reproductive efficiency. He also excels on the carcass front, with plenty of muscle, positive rib and rump fat, and above-average IMF. His dam, Rolling Rock 18013—Sarah’s favourite cow in the herd—is an easy-keeping female who excels for udder quality and has produced several bulls to make the sale including another at a \$16,000. Altogether, 22127 represents the type of sire we aim to breed: functional, balanced, and built to add real value across a range of breeding programs.

### Comments

S Right Time 7861 is a powerful, phenotype-driven sire that has gained a strong following for his ability to inject muscle, depth, and real-world functionality back into Angus cattle. A standout from the renowned Spickler Ranch North program, he is widely regarded as one of the most physically impressive bulls to enter ABS collection centre in recent years—an “absolute beast” with exceptional width, power, and structural soundness. His strength doesn’t stop at phenotype—Right Time is backed by a proven maternal pedigree and as you can see studying his pedigree, he is out of S Chisum 6175 dam. Chisum 6175 was used extensively around NZ and has over 1700 progeny analysed on Breedplan. Right Time 7861 has consistently transmitted fertility, udder quality, foot structure, and longevity, with daughters recognised as easy-keeping, productive cows. He combines this maternal strength with solid growth and carcass performance, making him a true all-rounder. In short, Right Time is the type of bull that adds ‘grunt’ without sacrificing the fundamentals—structure, fertility, and do-ability—making him a valuable tool for building durable, profitable cow herds.

A thick, stout Ellingson Prolific son to get our 2026 sale offering underway. 24102 has plenty to like—he stands on good feet and legs, carries strong muscle expression, and comes with that ‘bomb-proof’ disposition we demand at Rolling Rock. We think you’ll appreciate the ‘cut’ of these Prolific sons and what they offer from both a phenotype and genotype perspective. 24102 is a good one to get you settled into the lineup.

**Comments**

A bigger-framed individual with plenty of length and scope. He is very much in the mould of his dam 21005, a larger-framed cow earning her place in the herd through faultless reproductive performance. She consistently rears quality progeny while maintaining the 365-day calving interval we demand, and she is back in calf early again for 2026—just like her granddam 15071, another standout for reproduction. This is exactly how we expect our cow herd to perform and is a non-negotiable under our FIFO policy at Rolling Rock. 24112 offers strong growth, ranking in the top 20% for 200- and 400-day weights and top 5% for 600-day weight, along with a Carcase Weight BV of +72kg (top 10%). He shapes as a bull that will add weight to his progeny, whether in the yards or on the rail, and should feature on a number of shortlists.

**Comments**

This fellow should capture your attention when you walk through the lineup, as there is plenty to like here. 24103 carries good bone, extra length of rib and capacity, stands on an excellent set of feet and legs, and comes with that user-friendly disposition. It's a well-balanced, appealing package that will complement a wide range of breeding programs. His dam Rangatira 16-1008 was the top-priced cow at the Rangatira dispersal, secured for \$12,000 after doing our homework prior to sale day, and in our view she was a standout. She is super quiet, very sound, does an excellent job on her calves, and maintains a strong calving interval—24103 weaned at 309kg. From a genetic perspective, he offers top 10% growth across the board, along with well-above-average Carcase Weight and IMF. A bull that should add value and is well worth closer inspection.

This quality Prolific son has been a standout from a calf on his dam 15067, who herself has been a tremendous performer within the herd. She has consistently produced quality calves each year—her five bull calves have all made our sale lineup—and she has maintained a solid calving pattern throughout. Unfortunately, 24108 is her last calf, as she succumbed to misadventure last winter. But with her final effort, she's left us with a good one. He weaned at 369kg and flourished post-weaning through to his yearling weights and carcass scan, and when combined with his structural integrity, it gave us compelling evidence to use him in our 2025 mating—so we did. He was a great 'worker' over joining, but when tipped back in with his contemporaries, he was picked on and it took a bit of the 'shine' off him. That said, it hasn't impacted his genetic make-up one bit, and he is bouncing back well now. We like to see how animals respond under pressure—their resilience in real-world conditions, just like what the commercial environment throws at them. If you're looking to add some real 'oomph' to your breeding program, this youngster should be firmly in your considerations when putting together your shortlist—we believe he has plenty to offer your program, and most importantly, your bottom line.

Another Prolific son with plenty of capacity and scope. As outlined in the sire profile, we used Prolific to enhance a number of traits, but one he consistently excelled in was his ability to inject real growth into his progeny—and 24101 is a prime example. He ranks in the top 1% across all growth traits for the 2024 calf drop, with his 600-day weight and Carcase Weight BV right at the very top end. He weaned at 362kg and has powered on from there. He's a 'stacked dice' if you're looking to lift kilograms of beef weaned or slaughtered per hectare. He does carry some white in the running gear, but it's purely cosmetic and won't influence performance. Well worth a good look.

A quick look at this youngster's pedigree tells you where the quality comes from. On the top side is Rolling Rock 22127, our Lot 1 bull in 2024, who sold to Kincardine Angus for \$17,000 after attracting strong interest for his overall phenotype and genotype package. He was thick, stout, and well put together, and we used him as a yearling to capture those traits in his progeny—something he's clearly delivered on. On the dam side is a young Kaharau 18 P333 cow, 21009, and you will have seen the consistency of P333 progeny through the ring here in recent years—well constructed, with that extra bit of grunt. She has done a great job presenting this fellow. With that sort of backing, 24120 was always likely to inherit plenty of desirable attributes, and we think he is well worth casting an eye over to see if he fits your program.

Plenty to like here. A very well-constructed individual with a 'leg on each corner', set on very good feet, with plenty of capacity and thickness. On paper he is nicely balanced—offering some calving ease, plenty of growth, solid fertility, and carcass traits rounded out with above-average marbling. As you would expect, he comes with that user-friendly disposition, which is non-negotiable here at Rolling Rock—if they don't have it bred in, they don't stay. Quiet cattle are proven to perform better—females conceive earlier, maintain condition, and rear better calves, all key drivers of a profitable system. His dam, Rangatira 20-1797, is a stout, easy-keeping cow with excellent udder quality who consistently does a good job on her calves. With this level of maternal strength combined with Prolific's influence, 24111 has all the makings of a quality 'cow maker'.

Plenty to like here—a nicely put-together youngster with good overall appeal. He stands up square, carries plenty of middle, has some nice muscle expression, and shows a bit of natural softness. On paper he's nicely balanced as well. He's the sort that will suit a range of programs, particularly where a balanced approach is required due to environmental limitations. Could easily warrant a tick or two.

Plenty of power in this pedigree when you take the time to study it. On the paternal side you'll find the likes of Kaharau Clarion 844, Heritage 421, and Lancer 699, while the maternal side stacks up just as strongly with Waihohonu 113, Braveheart of Stern, Rangatira Grand Finale 19-768, and ultimately his dam 15070—who is still here at Rolling Rock and back in calf again as an eleven-year-old. With that depth of breeding behind him, it's no surprise this fellow carries plenty of stoutness and quality. A real case of what you see is what you get—an honest, powerful individual well worth assessing against your breeding objectives.

Another 22127 son that will catch your eye. A very thick, stout individual built on plenty of bone, with that 'leg on each corner' structure we are striving for here at Rolling Rock. He carries good overall structural integrity and presents as a very complete package. On paper he offers solid growth, is strong through the running gear, and carries a muscle BV of +5.7, ranking in the top 25% of his drop. A well-rounded bull with plenty to offer and one that should earn a tick or two when you're putting your shortlist together.

**Comments**

The first of our S Right Time 7861 sons, and one that will require some close scrutiny—particularly if 'stayability' traits are high on your list. For those familiar with our program, his dam 11747 has been a real stalwart. She has produced a number of sale bulls, including a set of twins, with sons selling to a high of \$13,000. At 13 years of age she reared 24105 in challenging conditions, weaning him at 310kg, and rebred early again before producing her final calf. Time has now caught up with her at 15 years, but her influence will carry on through her progeny, including a 2025 heifer by Tangihau Traveller T608. 24105 presents with a nicely balanced data set to match what you see—moderate birthweight, adequate growth, strong fertility backed by genuine cow power (Right Time x Braveheart), and solid carcass traits with above-average marbling. A well-credentialed bull built to perform and add value.

Another S Right Time son with plenty to like, backed by a strong maternal line that is consistently delivering real-world production. His dam Rangatira 19-1529, one of the top-priced heifers when we purchased her, is emulating the performance of her dam. She is a thick, powerful female with plenty of constitution and has proven her worth—rearing 24107 in less-than-ideal conditions to 345kg, rebred early, and then successfully raising a set of twin bull calves in 2025. We left both calves on her, and she weaned a combined 512kg, all while maintaining the early calving interval we demand. 24107 reflects that strength, with extra length—“as long as a Sunday sermon”—and as we know, length equates to weight and added value. With this backing and a balanced data set, he is a ‘stacked dice’ to lift production in any herd.

A homebred youngster that offers a bit of punch. He's a stout, thick individual on the phenotype front and carries a nice balance on paper as well. His sire 22108 sold to Kim Robinson, Lochiel Farms for \$12,500 after we used him to follow up our AI program, and an interesting note—his sire Waiterenui BW N131 (Wily), who we purchased as a yearling, is still going strong in the South Island high country at rising nine years of age. There's plenty of longevity in the background here. We think you'll appreciate the overall quality this young fella brings and how his genetic package could be put to work in your program. A solid, honest bull with plenty to offer.

**Comments**

A Prolific son with plenty of stoutness and middle, along with that in-built constitution we like to see in the mix. If you're looking to inject growth, this fellow needs to be in your considerations—every one of his growth traits sits in the top 1% for the 2024 drop. That's the sort of profile that has a real, tangible impact on your bottom line, whether you're selling heavier weaners, taking them through to yearlings, or hanging them heavy on the rail. He weaned at 339kg and, like the rest of the Prolific progeny, has that natural ability to grow and weigh. A genuine growth option and one well worth a spot on the shortlist.

By now you'll have a fair handle on the consistency of these 22127 sons, and 24133 fits that mould. A stout, thick individual with good muscle expression who moves freely on a strong set of legs and feet. On paper, he brings serious firepower—all growth traits in the top 1%, Scrotal Size in the top 10%, a ribeye of +6.2, and a Carcase Weight of +109, which has him right at the top end of the 2024 drop. He's got all the credentials to be a real value-add in a cow/calf system.

**Comments**

Plenty of stoutness, depth, and grunt to this youngster. The only Rangatira Grand Finale 19-768 son in the draft, and he's got plenty of quality to take in when you see him in the flesh. He stands on good bone, with strong feet and legs, and carries that tidy, well-bred muscle expression we are aiming for. There's some serious horsepower in the pedigree—Grand Finale (a \$75,000 sire) and Outlander 632 (\$95,000) on the top side, and going back to the old matriarch 11747 on the bottom. It all stacks up to make him a 'stacked dice' genetically, with plenty of upside in the quality of his progeny. One to give a proper going over on sale day.

**Comments**

The first calf out of a two-year-old heifer, and he's come through as a real growth type. Both his dam and granddam are bigger-framed cows with plenty of scope, and he's followed that pattern. His growth figures back that up—top 5% for 200-day and top 1% for both 400- and 600-day weights. He's also strong through the running gear, with a solid EBV there, and carries a Carcase Weight of +93, putting him right up at the top end. Add a strong ribeye, and he's the type that will grow quickly and hang up heavy on the rail.

**Comments**

Another powerfully constructed Prolific son that will catch your eye when you walk through the lineup. As you've seen, the Prolifics bring that real three-dimensional shape, and this fellow is no different—strong through the head, thick, with plenty of capacity and muscle. He offers a genetic package that will fit a wide range of programs. Give him a bit of time when you're going through the draft—there's plenty here to like, and we think he'll earn himself a tick or two.

**Comments**

Plenty of thickness and middle to this youngster. He's built for the hills—on a strong set of legs and feet, with that in-built constitution and doing ability we value. He's the second calf out of a Kaharau Prince P395 daughter, 21030, who is shaping up well and is back in calf early again. Her dam 18013 needs no introduction to those who follow pedigrees—she's the dam of 22127 and one of our top cows, particularly for udder quality. With that backing and a balanced data set, 24146 presents as a very workable option for hill country systems.

**Comments**

A strong growth profile here, with 200, 400, and 600-day weights all ranking in the top 5% or better. He also offers above average scrotal size and ranks in the top 10% for Carcase Weight and Retail Beef Yield. These are key drivers in a profitable beef system, making him a worthwhile bull to assess against your breeding objectives.

**Comments**

The last of the 22127 sons in the draft, and another example of the consistency he's stamped through his progeny. We like to judge a sire on his ability to minimise wastage, and there hasn't been much of that with 22127—he's left a very even line-up. There will be daughters coming through the herd as well. Back to 24124—there's plenty of balance here, and his self-replacing index backs that up. One of the later lots that brings some genuine 'cow-making' qualities to the table.

**Comments**

A stout, thick individual with plenty of appeal. He stands on a good set of legs and feet, has a big 'motor', and carries that extra length of rib. On paper he's nicely balanced—calving ease, plenty of growth, strong through the scrotal, and rounded out with solid carcass traits and marbling. One that will warrant some scrutiny on sale day to see if he works his way onto your shortlist.

WAITERENUI VINE J229 (SV)

WAITANGI M400

SPRINGDALE 128

**Comments**

A stout, practical hill country type, built to get out and cover the country over mating. He's out of a good Waiterenui BW N131 daughter, 20024, an easy-keeping cow that does a good job on her progeny and maintains a solid calving interval. One of the later lots that will slot into a number of hill country systems.

Fitting that we finish the draft with another Prolific son, and by now you'll have a fair idea of what this sire line brings to the table. 24104 is a moderate, thick type, very much in the mould of his dam 15030—an easy-keeping, high-performing cow who has had four sons through the sale ring, with daughters retained and performing well. She maintains a strong calving interval and is back in calf early to our \$115,000 sire Tangihau Traveller T608—look forward to seeing those calves in 2027. A good, honest bull to round things out, who will fit into a wide range of programs.
