NATIONAL HIGH INDEXED ELITE NZ JERSEY GENETICS INMILK AUCTION

NZ FARMERS LIVESTOCK

Working with Farmers for Farmers

This herd is currently ranked No 2 Nationally for Indexes and was originally established in 1965 as the Awatui Jersey Stud. Faithfully farmed by the Wright Family for 60yrs.

COMPRISING

350 Cows. D.T.C 22nd July. 85% in calf to A.I.BW 320 PW 351
120 R2yr Heifers. D.T.C 12th July. 90% in calf A.I. BW 366 PW 323
100% Recorded G3 Profiled with RKT Participant Code.

3 Generation Pedigrees available.

22 Dams are in calf to an LIC Contract.

12 Dams have been offered a Spring 2026 LIC Contract.

27 Dams have been offered a Spring 2026 LIC sexed semen Viking Genetics Contract

The Herd has an immaculate Animal Health Record.

Lepto Vacc 4th Feb

BVD Vaccinated.

BVD Bulk Milk Undetected 10th Nov 2025.

TB C10 Last Test 21st Nov 2025.

Johnes Tested Clear 10th Feb 2026.

85% of the herd are A2A2.

Consistently producing 420kgms on a hard dry farm with young cows milked OAD all season and balance from 1st January . Feb 10th HT 1.8kgms. SCC Avg 56.

Payment: 14 days from sale.

Delivery: From 26th March or 1st June by prior arrangement.

NZ Farmers Livestock are privileged to bring the Team Wright Herd and R2yr Heifers to the market after 60yrs of passionate Nominated Breeding. This is an exceptionally well bred NZ Genetic Herd with exceptional Dairy Type to match the High Indexes.

Jersey Breeders this is a rare opportunity to purchase Genetics of such a high calibre and one not to be missed.

Inspection prior to sale Monday 9th March 12 noon.

VENDORS: Phil & Sandra Wright

Welcome to Our Sale

As a family we are very attached to our cows which we have breed over the last 60 years, 35 years have been here at Rotoma.

While it's a nice place to live and bring up a family nestled in the bush and lakes, it has certainly been a hard place to Dairy farm due to the fact that it is drought prone and the cows walk long distances.

Every year we have sold approximately 100 of our lower indexed cows and because they are leaving a farm which is considered one of the hardest in the Bay of Plenty, the feedback has always been very positive regarding their production performance.

We are looking forward to the next chapter of our lives, but it doesn't make it any easier to offer up our Herd for sale.

We really appreciate everyone attending the sale, and we know with confidence there are some tremendous Dams for sale.

We'd also like to thank Michael Conwell from NZ Farmers Livestock who is passionate about our stock, for helping us transition through this period.

Thank You
Phil and Sandy Wright

Important Notice

The information printed in this catalogue is derived from data supplied by the vendor and stored in the LIC or CRV database. Whilst every care has been taken to ensure accuracy, no claims of any sort of error or omission may be made against LIC, CRV or NZ Farmers Livestock Ltd.

NZ Farmers Livestock Finance ***Here to support you through this upcoming season.***

Whether topping up with additional dairy cows, replacement cattle, or store lambs, here at NZ Farmers Livestock, we can help. We offer a quick and simple finance solution with terms and conditions fine-tuned to your needs. We know finance flexibility and speed of delivery is a necessity when it comes to farming.

To arrange finance to purchase this week or just to discuss options going forward, contact

Simon Williams 07 889 1673 or 027 491 2173.

CASE STUDY

The pursuit of genetic excellence

How Phil and Sandy Wright achieved the second highest BW Jersey herd in New Zealand.

Phil & Sandy Wright

At Rotorua's Taumanu Land Trust, Phil and Sandy Wright have spent decades meticulously shaping their 525-cow Jersey herd into one of the country's top performers, today ranking second highest in New Zealand for both Breeding Worth (BW) and Production Worth (PW). As they prepare to sell their herd this March, the Wrights reflect on a journey defined by consistency, data-driven decisions and a deep relationship with LIC that has transformed their operation into a benchmark for herd improvement.

The Wrights' herd has a rich 60-year history beginning with Phil's father who was a Jersey breeder.

When we took over the herd, my dad was very focused on conformation rather than BW. But we soon realised buyers were prioritising BW and PW, so we shifted our focus, keeping the very best animals each year and repeating that process.

Over time, Phil and Sandy applied modern breeding principles combined with LIC genetics to elevate the herd to new levels of performance, consistently making small tweaks each year to improve their genetic gain.

Herd improvement genetic merit

National Average = Herds over 100 BW with more than 100 cows

In the last five years, the Wright's herd has gained an average BW of 52.12 and an average PW of 51.35, both considerably above the national herd average gains.

Breeding worth (BW) trends

— BW Team Wright Ltd — BW National Average
— PW Team Wright Ltd — PW National Average

Phil has always had a disciplined approach to record-keeping, and tracks every detail, from BW and PW to udder overall and fertility. Sandy, meanwhile, plays a critical role rearing hundreds of calves each season and helping supervise the data and breeding programmes, ensuring the next generation reaches its full genetic potential. Together, their efforts have built a herd renowned for strong udder quality, balanced stature, and longevity - all traits that reflect years of strategic breeding decisions.

Improvement starts at the bottom

One of the simplest, yet most powerful strategies the Wrights adopted was focusing on their bottom performing cows. "Most farmers focus on their top cows," Phil notes. "We focus on the bottom, and by doing so, we've transformed our herd. If you lift the bottom, the top will follow. That's been our philosophy from the start."

"If they're not performing, I don't let emotion come into it - it's about looking at the herd as a whole. To drive the herd higher and better, I'd always focus on the bottom."

By rearing a large base of calves and carefully selecting the very best animals each year, the Wrights created a virtuous cycle of improvement. Phil says the couple kept all their AI born heifers, sometimes dealing with up to 200 at a time.

"By bringing those numbers into the base of the herd, we were able to pick the very best animals, focus on those, and then, we would sell the bottom."

Their breeding strategy has been grounded in using the best LIC Jersey bulls. Phil, who has been an AI technician for over three decades, personally nominates cows for mating, matching top bulls to the best females and using crossbred bulls selectively on lower-performing animals to lift their potential. This combination of precision mating and rigorous culling has allowed the Wrights to steadily increase BW and PW while maintaining udder quality, stature, and longevity.

Synchronising heifers for mating has also improved reproductive performance, giving animals multiple opportunities to be inseminated with high-value bulls and further enhancing the herd's genetic potential.

Don't make decisions in isolation

Reflecting on what has made a profound difference in their sharemilking journey, Phil points to the relationship with their Agri Manager, Caroline Whiteley.

"Growing that relationship has been massive. It's not just helping to choose bull semen. It's her support and advice throughout the whole year. Caroline's guidance in bull selection and long-term breeding strategies has allowed us to refine our breeding programme, consistently choosing bulls that complement their herd's strengths and drive genetic gain."

Danie Swart, LIC Bull Acquisition Manager, says LIC's contract mating females will be mated to the highest index genomic bulls available to potentially generate marketable sires which can increase the genetic gain for dairy farmers across New Zealand.

The detail is in the data

Phil and Sandy supervise all their data inputs themselves, from recording calf births to loading matings into MINDA® to ensure data accuracy.

Custom reports and a focus on key metrics such as somatic cell counts, fertility, and culling guides allow them to make rapid, informed decisions each season. Phil also generates and monitors inbreeding reports and maintains detailed spreadsheets highlighting the herd's top and bottom animals, which guide both mating and culling decisions.

"It's about knowing your numbers. Most farmers didn't get into farming because we wanted to do book work or focus on numbers, so being in a format that you understand and that's easy to use makes all the difference."

Phil reflects on the opportunities that genomic data has added to their toolbox. "Going forward, I would probably focus more on the new data coming through with the DNA technology we have available to us now and going deeper with that information. It took a lot for our Agri Manager Caroline to convince us to adopt genomic testing on the whole herd, but it's paying off and has proved to be a really valuable investment for us."

The Wright's disciplined approach has yielded remarkable results. Despite downsizing their herd from 700 to 525 cows the Wrights have increased milk production by 25,000–30,000 kilograms per season. Their focus on efficiency and genetics has not only improved productivity but also reduced environmental impact, aligning with their local catchment's strict nitrogen and phosphorus limits.

A lasting legacy

As they prepare to sell the herd, Phil and Sandy's success is not only measured in BW and PW rankings but in the legacy of a herd built through careful selection, data-driven decisions and strategic use of LIC genetics.

Through years of meticulous breeding, consistent culling and a focus on lifting the bottom-performing animals, the Wrights have created a Jersey herd that serves as a blueprint for herd improvement.
